

Higher Education Marketing Institute Identifies 11 Higher Ed SEO Agencies Adapting to AI Search

November 28, 2025

NEW ORLEANS, LA - November 28, 2025 - PRESSADVANTAGE -

The Higher Education Marketing Institute has published an analysis identifying 11 SEO agencies helping colleges and universities prepare for AI-powered search in 2026. The November 2025 report evaluates how agencies serving the higher education sector are adapting to generative engine optimization as prospective students increasingly turn to AI tools when researching educational options.

Topping the list of higher education SEO agencies, Search Influence. The New Orleans digital marketing agency, founded in 2006, earned the first position through its early development of generative engine optimization strategies and an ongoing research partnership with UPCEA, the professional association for online and professional continuing education. That research collaboration has produced actionable data about student search behavior, including a 2025 study finding that half of prospective students now use AI tools at least weekly during their college search.

The analysis comes at a pivotal moment for enrollment marketers. Traditional search engine optimization has

driven higher education digital strategy for nearly two decades, but AI-powered search works differently. Rather than ranking web pages, systems like ChatGPT, Google AI Overviews, and Perplexity synthesize information and generate responses. For institutions, this means visibility now depends on how well AI systems understand and represent their programs—not just where their pages rank.

EducationDynamics, the Kansas-based enrollment marketing company known as EDDY, ranks second. With roots going back to 1990, the firm brings deep traditional expertise while building out AI search capabilities. Third-ranked Think Orion operates from Singapore, pairing creative performance marketing with emerging GEO approaches. Silverback Strategies, an Arlington, Virginia firm known for analytics-driven work, comes in fourth.

The middle tier includes several established names. WebFX, the Harrisburg, Pennsylvania agency operating since 1996, ranks fifth as it extends enterprise-scale capabilities into higher education. Los Angeles-based HawkSEM takes sixth with its focus on conversion optimization. SmartSites of New Jersey and Florida-based Primacy, known particularly for user experience design, rank seventh and eighth respectively.

Rounding out the list, Zero Gravity Marketing of Connecticut provides traditional SEO services to educational clients from its Glastonbury headquarters. Stratedia, also Connecticut-based, specializes in local search for regional colleges. Mad Fish Digital of Portland combines purpose-driven marketing with developing GEO capabilities, ranking eleventh.

"What strikes me about this landscape is the gap between agencies actively building generative engine optimization capabilities and those still focused exclusively on traditional search," said Will Scott, CEO of Search Influence. "Both matter right now, but institutions choosing partners today need to think about where student search behavior is heading, not just where it's been. The agencies on this list all serve higher education, but their readiness for the AI search era varies considerably."

The Higher Education Marketing Institute developed evaluation criteria to help institutions assess potential partners. The framework considers factors like agency tenure and stability, documented work with colleges and universities, and demonstrated generative engine optimization experience rather than just marketing claims. That last distinction matters as more agencies rebrand existing services under AI terminology without substantive capability changes.

For enrollment leaders, the stakes extend beyond marketing efficiency. Prospective students who can't find an institution through their preferred AI search tools may never know it exists—regardless of how well traditional SEO performs. The behavioral shift is already underway, and the institutions adapting now will have advantages as AI search matures.

The complete analysis with methodology details and individual agency profiles is available through the Higher Education Marketing Institute. More information about Search Influence and its higher education marketing services is available at www.searchinfluence.com.

About the Higher Education Marketing Institute

The Higher Education Marketing Institute researches and analyzes marketing practices shaping how colleges and universities connect with students. Through industry reports, agency evaluations, and strategic guidance, the Institute helps enrollment professionals and institutional marketers make sense of emerging technologies and shifting student behaviors. Its work supports data-driven decision making for institutions navigating an increasingly complex digital landscape.
