ELIS Manufacturing & Packaging Reinvents Powder Production with Tailored Custom Blending Solutions

December 02, 2025

KAUFMAN, TX - December 02, 2025 -
ELIS Manufacturing & Packaging Solutions, Inc., a Kaufman TX contract manufacturer and packager, is placing renewed focus on its custom blending services as demand continues to grow for precision-formulated powdered products across the wellness, nutraceutical, and functional food sectors. ELIS supports a wide range of brands with dependable dry powder blending capabilities, tailored to meet strict quality standards and production timelines.

Known for its ability to manage complex formulations with consistency and control, ELIS?s custom blending operation handles a diverse mix of powdered inputs?ranging from vitamins and minerals to botanical extracts, proteins, and functional ingredients. Whether supporting a first-time formulation or maintaining an established product line, the company provides manufacturing environments where consistency, cleanliness, and compliance drive every batch.

The service is designed for brands requiring either full-scale production or small-batch flexibility, and it supports numerous delivery formats including single-serve packets, pouches, tubs, and bulk containers. Every stage of the blending process is monitored and documented under cGMP protocols, ensuring that clients receive full traceability and validation of their final product. ELIS also prepares and maintains comprehensive batch records for each formulation to meet internal quality benchmarks and external regulatory audits.

?Blending powdered ingredients isn?t just about mixing materials?it?s about delivering on a brand?s promise to its customers,? said Keith Vinson, Chief Executive Officer of ELIS Manufacturing & Packaging Solutions. ?With our custom blending capabilities, we provide clients with the reliability and transparency they need to bring consistent, high-quality products to market.?

ELIS?s blending systems are engineered to promote uniform distribution of active ingredients while

minimizing risk of cross-contamination or segregation. This is essential in powdered formulations where functional benefits rely on precisely measured components. The company routinely works with client teams to ensure compatibility of ingredients, sequence of blending, and batch reproducibility?all factors critical to brand reputation and regulatory compliance.

The Irving-based facility is equipped to accommodate various production volumes without compromising turnaround time. This operational agility makes it possible to serve a broad spectrum of customers, including direct-to-consumer startups, established wellness lines, and private-label suppliers requiring reliable manufacturing support. Blends can be tailored for nutritional supplements, beauty powders, fitness products, and functional beverages, among other applications.

In addition to core blending, ELIS assists clients with related services such as sourcing validated ingredients, conducting in-process testing, and managing packaging integration. These support services are designed to streamline the manufacturing process and reduce delays that often arise when coordinating multiple vendors. ELIS works closely with ingredient suppliers to ensure not only quality but also long-term availability for clients scaling their product lines.

Vinson emphasized the importance of dependable execution in today?s fast-moving supplement and wellness markets. ?Brands need more than a facility?they need a manufacturing partner who understands formulation dynamics, regulatory detail, and operational discipline,? he said. ?We?re proud to offer that through our custom blending program, where consistency and quality are never negotiable.?

The company?s manufacturing philosophy is grounded in detail and accountability. From lot-specific ingredient tracking to cleanroom-level sanitation procedures, ELIS maintains a system built around audit readiness and brand protection. This structure enables clients to scale production with confidence while remaining compliant with labeling, safety, and export requirements.

ELIS?s clients also benefit from stable vendor relationships and a transparent supply chain. These connections help reduce lead times, prevent ingredient shortages, and maintain consistent pricing?factors that directly impact production continuity and cost control.

With increasing demand for differentiated powders that meet consumer expectations for purity, functionality, and clean-label transparency, ELIS Manufacturing & Packaging Solutions continues to serve as a trusted blending partner. Its role in supporting brands through formulation, compliance, and production remains central to its identity.
