

New Closed-Cell Spray Foam Insulation Service Now Available for Local Homes

December 08, 2025

SPENCER, MA - December 08, 2025 -
Lamothe Spray Foam Insulation announced the launch of a new Open-Cell Spray Foam service in Hartford, CT, for residential and commercial properties. The expansion arrives as the region prepares for colder weather, a season when insulation upgrades become a practical priority for property owners seeking energy efficiency and indoor comfort.

The new service adds to the company?s existing offerings, which previously focused primarily on closed-cell insulation. Open-cell spray foam offers greater flexibility for filling irregular spaces and addressing air-sealing and sound-control needs. This addition makes it suitable for older buildings, mixed-use structures, and ongoing renovation projects.

Lamothe Spray Foam Insulation in Hartford, CT, highlighted that local demand for insulation improvements tends to rise in early fall. Data from regional energy audits shows that older buildings in New England often lose significant heat through attics, walls, and other gaps. Proper insulation during this season can reduce

fuel consumption and support more consistent indoor temperatures.

The company also emphasized the growing need for local businesses to maintain clear communication and digital support regarding property improvements. By expanding their service offerings, they can provide more detailed guidance to building owners evaluating the right insulation solutions for their structures.

Robert Lamothe, owner of Lamothe Spray Foam Insulation, said, ?Many structures in this region were built before modern insulation standards, and the shift into colder months often highlights areas where buildings lose heat. Adding open-cell options helps us respond to concerns that small businesses and homeowners share about controlling indoor temperatures without placing extra strain on their energy use.?

The addition of open-cell spray foam complements existing closed-cell services, providing options for different areas and needs within residential and commercial buildings. Closed-cell insulation remains effective for moisture-resistant applications, while open-cell foam is suitable for spaces where flexibility and air circulation are priorities.

Lamothe Spray Foam Insulation stated that the expanded service supports the community?s seasonal preparation for heating months. Property owners can now plan insulation work before winter sets in, helping maintain comfort for employees, residents, and visitors while managing energy consumption. The company sees this service expansion as part of its broader commitment to supporting local property owners in Hartford. By offering both open-cell and closed-cell spray foam, Lamothe Spray Foam Insulation provides practical solutions suited to the area's diverse building types, helping the community prepare efficiently for colder weather. The launch of the new service underscores the role insulation plays in energy management and indoor comfort. For Hartford homes and businesses, addressing insulation needs early in the fall can help reduce heating costs and create a more stable indoor environment throughout the winter.

This expansion also gives property owners more flexibility when scheduling projects. Many residents and businesses have busy fall calendars, so having an early option makes it easier to complete insulation upgrades without disrupting daily routines. The company noted that early action can also prevent common winter issues such as cold spots, drafts, and higher utility bills. Well-installed spray foam helps reduce heat loss, supports healthier indoor air quality, and adds a layer of protection against moisture.

Local contractors have also expressed that early fall is the ideal time for insulation work because weather conditions are generally steady. This helps teams work faster and complete projects with fewer delays. With Hartford?s winters often bringing extended periods of low temperatures, having insulation in place before seasonal changes start can make a significant difference in comfort and long-term savings. Lamothe Spray

Foam Insulation aims to give property owners a simple way to improve their buildings and feel more prepared for the months ahead.
