

Adele Diamond Presents Engagement Rings with Lab-Grown Diamonds to Align with 2025 Trends

December 04, 2025

VIRGINIA BEACH, VA - December 04, 2025 -
Adele Diamond - Hilltop is a jewelry store that features a selection of engagement rings in Virginia Beach, VA, incorporating lab-grown diamonds alongside natural diamonds. This approach corresponds with 2025 engagement ring trends that emphasize ethical sourcing, unique cuts, and personalization, as identified in recent industry reports.

Trends for 2025 highlight a preference for colored stones, unusual cuts such as marquise and oval, asymmetry, mixed metals, and a focus on sustainability. Publications like Vogue and The Knot note that couples increasingly seek ethically sourced gems, with lab-grown diamonds offering an alternative that reduces environmental impact while maintaining quality. Larger, bolder designs also gain prominence, including elongated shapes and maximalist multi-stone settings. The market reflects this shift, with consumers prioritizing pieces that reflect personal values and creativity.

Adele Diamond - Hilltop addresses these trends by offering engagement rings that can be customized with lab-grown or natural diamonds. The store provides loose diamonds in various shapes, including round, princess, cushion, emerald, oval, radiant, asscher, marquise, heart, and pear, allowing for designs that

incorporate trending cuts like marquise and oval. Customers can select from complete engagement rings or build their own by choosing settings and diamonds. Examples include a 14K yellow gold ring with a 1-carat lab-grown diamond and a 14K white gold ring with a 3-carat oval diamond. These options enable the creation of asymmetrical or east-west set rings, aligning with current preferences for unique orientations.

The lab-grown diamonds available at Adele Diamond - Hilltop are created in controlled environments, replicating the natural diamond formation process. This method supports ethical considerations by avoiding mining operations associated with environmental degradation and human rights concerns. Natural diamonds are sourced from verified post-consumer sources in the United States, further emphasizing sustainability. The store's inventory includes AGS and GIA-certified diamonds, ensuring quality across both types.

In addition to product offerings, Adele Diamond in Hilltop provides educational resources on its website to inform customers about diamond selection. Topics cover differences between lab-grown and natural diamonds, quality factors, and value assessment. This information assists buyers in understanding how lab-grown options provide comparable sparkle and durability at potentially lower costs, fitting the trend toward accessible luxury.

The store also carries complementary bridal jewelry, such as wedding bands in styles like eternity, classic, and unique designs. Collections from designers like Gabriel & Co. are featured, offering coordinated sets for engagement and wedding rings. This comprehensive approach allows customers to find matching pieces that incorporate mixed metals or other trending elements.

Chris Lyons, co-owner of Adele Diamond, commented, "Engagement rings with lab-grown diamonds offer couples a way to embrace sustainability without sacrificing elegance. The variety in shapes and settings available enables personalization that reflects individual styles amid evolving trends."

Ashley Lyons, co-owner, added, "Customers value the ethical aspects of lab-grown diamonds in their engagement rings. This option supports informed choices that align with personal values and current market preferences."

Adele Diamond operates physical locations in Virginia Beach, providing in-person consultations alongside online shopping capabilities. The website facilitates browsing and purchasing, with tools for starting designs with either natural or lab-grown diamonds. Founded as a family-owned business, Adele Diamond has served the Coastal Virginia area since 2007, focusing on bridal and fashion jewelry, including designer pieces, watches, and custom designs. The store aims to create an approachable environment for jewelry selection, drawing on customer feedback that highlights knowledgeable staff and a pressure-free experience.

This positioning allows Adele Diamond to cater to the 2025 trends, where ethical sourcing and customization play central roles in engagement ring choices. By offering both lab-grown and natural diamonds in diverse shapes and settings, the store meets the demand for sustainable, personalized luxury in the bridal market.
