Tamra Bedford, Cosmetic RN Announces Enhanced Microneedling Program for San Ramon Medical Spa

December 09, 2025

SAN RAMON, CA - December 09, 2025 -
Tamra Bedford, Cosmetic RN, a medical spa in San Ramon, California, announces an enhanced microneedling program designed to address increasing client demand for collagen induction therapy throughout the Bay Area. The registered nurse practitioner has expanded treatment protocols to incorporate updated techniques and medical-grade technology for addressing skin texture, fine lines, and uneven skin tone.

The enhanced program introduces refined treatment protocols based on recent advancements in collagen induction therapy. The medical spa has integrated new assessment procedures and customized treatment planning to address specific skin concerns including acne scarring, enlarged pores, and age-related texture changes. These updates reflect current industry standards for non-invasive skin rejuvenation procedures.

At the microneedling San Ramon facility, the expanded program utilizes controlled micro-injury techniques to stimulate natural collagen and elastin production. The treatment creates precise micro-channels in the skin, activating the body's healing response. This process has been shown to improve skin texture and reduce the appearance of fine lines over a series of treatments.

"The evolution of microneedling technology has enabled us to develop more targeted treatment protocols for different skin types and concerns," said Tamra Bedford, Cosmetic RN and owner of the medical spa. "By implementing these enhanced techniques, we can now offer more precise depth control and treatment customization, which allows us to address a broader range of skin conditions while maintaining appropriate safety standards."

The enhanced program incorporates comprehensive skin analysis before each treatment session. This assessment process evaluates skin thickness, elasticity, and specific areas of concern to determine appropriate needle depth and treatment intensity. The medical spa has also implemented updated

post-treatment protocols to support the skin's natural healing process.

Advanced microneedling treatments at the facility now include options for combining the procedure with other therapeutic modalities. The medical spa offers integrated treatment plans that may incorporate chemical peels for enhanced exfoliation, IPL therapy for pigmentation issues, and injectable treatments for volume restoration. These combination approaches are scheduled based on individual skin response and recovery patterns.

The San Ramon medical spa operates under the medical supervision of Dr. Stephen Ronan, MD FACS, maintaining compliance with California medical spa regulations. The facility follows established safety protocols for all invasive procedures, including proper sterilization techniques and single-use needle cartridges for each treatment.

Recent data from the American Society for Dermatologic Surgery indicates that microneedling procedures have increased by 32 percent over the past three years, reflecting growing acceptance of minimally invasive skin treatments. The procedure's ability to stimulate natural collagen production without significant downtime has made it particularly popular among working professionals in the Bay Area.

Tamra Bedford, Cosmetic RN operates as part of Blackhawk Plastic Surgery, offering medical-grade aesthetic treatments including laser hair removal, injectable treatments, chemical peels, and skin rejuvenation therapies. The practice serves clients throughout San Ramon Valley and the greater Bay Area, providing individualized treatment plans based on skin type, concerns, and treatment goals. The medical spa maintains current certifications and follows established protocols for all aesthetic procedures.
