

Delta Roofing Addresses Lowcountry's Growing Storm Repair and Roof Replacement Demand

December 08, 2025

RIDGELAND, SC - December 08, 2025 -
Delta Roofing reports a substantial increase in service requests across South Carolina's Lowcountry region as property owners address storm damage and aging roof systems. The Ridgeland-based contractor serves Hilton Head Island, Bluffton, Beaufort, Hardeeville, and surrounding communities where coastal weather conditions accelerate roof deterioration.

According to the National Roofing Contractors Association, asphalt shingle roofs?the most common type in residential construction?typically require replacement every 15-25 years, depending on climate conditions. Coastal regions face additional challenges from salt air, high humidity, and severe weather events that can reduce roof longevity by 20-30 percent compared to inland properties.

South Carolina has experienced multiple significant weather events in recent years, including hurricanes, tropical storms, and severe thunderstorms that have damaged residential and commercial roofing systems throughout the Lowcountry. The South Carolina Emergency Management Division documented extensive

property damage from these events, creating sustained demand for qualified roofing contractors.

Delta Roofing specializes in storm damage assessment, emergency repairs, and full roof replacement services. The company works with insurance adjusters to document damage and process claims, a service that has become increasingly important as extreme weather events affect the region with greater frequency.

Industry data indicates that metal roofing installations have increased 15 percent annually over the past five years in coastal markets, driven by superior wind resistance and longevity compared to traditional asphalt shingles. Metal roofing systems can withstand wind speeds up to 140 mph and last 40-70 years, according to the Metal Roofing Alliance. Delta Roofing reports that approximately 35 percent of its new installations now involve metal roofing, compared to 20 percent five years ago.

The company provides residential and commercial roofing services, including new installations, repairs, maintenance programs, and complete roof replacements. Material options include asphalt shingles, metal roofing systems, tile, and slate, with selection based on property requirements, budget parameters, and local building codes.

Energy efficiency considerations have also influenced roofing material selection. The Department of Energy estimates that reflective roofing materials can reduce cooling costs by 10-15 percent in hot climates. Delta Roofing offers energy-efficient roofing options that meet or exceed Energy Star certification requirements, addressing growing interest in sustainable building practices.

Licensed and insured under South Carolina regulations, Delta Roofing conducts operations in compliance with state and local building codes. The company maintains manufacturer certifications for major roofing product lines, ensuring warranty coverage for installed systems.

Property owners in the Lowcountry region seeking roofing services can contact Delta Roofing at (843) 489-8555 for damage assessments and project consultations. The company provides written estimates detailing material specifications, labor requirements, and project timelines.
