

Microsurgical Vasectomy Reversals by Dr. Mark Hickman Expands Services to Meet Growing Demand for Reversal Procedures

December 22, 2025

New Braunfels, TX - December 22, 2025 -
Microsurgical Vasectomy Reversals by Dr. Mark Hickman has announced an expansion of services to accommodate increasing demand from men seeking fertility restoration following vasectomy. The practice, based in New Braunfels, Texas, has enhanced its microsurgical protocols and patient care processes to better serve patients throughout Texas, Louisiana, Oklahoma, and beyond.

The expansion comes as more men nationwide seek vasectomy reversal options due to life changes such as remarriage, evolving family planning goals, or decisions to expand their families. Dr. Mark Hickman, a microsurgical surgeon with over 26 years of experience, has performed thousands of successful reversal procedures using advanced techniques that significantly improve success rates.

"The demand for vasectomy reversals has grown substantially as surgical techniques have advanced and success rates have improved," said Dr. Mark Hickman, founder and lead surgeon. "Our expanded services

allow us to provide comprehensive care to more patients while maintaining the highest standards of microsurgical precision and patient support."

The practice specializes in microsurgical repair of the vas deferens, utilizing powerful operating microscopes and fine nylon sutures to achieve precise alignment and watertight closure. This meticulous approach creates optimal conditions for restored fertility following the vasectomy reversal procedure.

To support patients traveling from outside the immediate area, the practice has enhanced its coordination services. These include assistance with scheduling and information about local accommodations in New Braunfels. The practice also provides extensive educational resources, including frequently asked questions and patient testimonials, helping prospective patients understand the procedure and recovery process.

The expansion includes improved consultation services, with free consultations available for men considering the procedure. During these consultations, patients can discuss their specific situations and learn about the surgical process, recovery expectations, and success rates based on individual factors.

The practice offers two comprehensive surgical options designed to meet different patient needs and preferences. The first option includes local anesthesia with oral sedation, while the second provides IV sedation administered by a board-certified anesthesiologist. Both options feature all-inclusive pricing structures with no hidden fees, making the procedure affordable for patients seeking fertility restoration.

"We understand that choosing to undergo a vasectomy reversal represents a significant decision for our patients and their families," noted Dr. Hickman. "Our expanded services ensure that every patient receives personalized attention and comprehensive support throughout their journey toward restored fertility."

The growth of the practice reflects broader trends in reproductive medicine, with vasectomy reversal becoming an increasingly viable option for men seeking to restore fertility. Advances in microsurgical techniques have substantially improved success rates, making the procedure a practical alternative for many couples.

Microsurgical Vasectomy Reversals by Dr. Mark Hickman specializes exclusively in vasectomy reversal procedures, bringing focused expertise to this specialized field of microsurgery. With thousands of successful procedures completed over more than two decades, the practice has established itself as a regional center for men seeking fertility restoration through advanced microsurgical techniques.
