

Mindmachines.com Introduces ROSHIwave IN-SIGHT Brainwave Meditation Machine with Disentrainment Technology

December 31, 2025

Dallas, Texas - December 31, 2025 -

Mindmachines.com has introduced the ROSHIwave IN-SIGHT Mind Machine, a portable device that employs disentrainment technology to guide users into meditative states. The device, now available through the company's online platform, utilizes photostimulation methods to normalize brainwave frequencies through calibrated light patterns delivered via specialized RGB-enabled glasses.

The ROSHIwave IN-SIGHT operates using a process called Dynamic Neuro-Activation, which differs from conventional entrainment methods by working to free brainwave patterns from repetitive cycles rather than synchronizing them to external stimuli. The brainwave meditation machine delivers specific light frequencies through glasses that function with both open and closed eyes, offering multiple operating protocols for various applications including sleep improvement and cognitive focus.

"The ROSHIwave represents our latest iteration in brainwave normalization technology, incorporating both

classic pROSHI protocols and new multiplexed versions," said Fred Williams, Director of Technology at Mindmachines.com. "The device provides users with approximately 100 different protocol options, addressing the diverse needs of both clinical practitioners and individual users seeking the best meditation gadget for their practice."

The technology has been adopted by nearly 100 clinicians worldwide who utilize it as an alternative to classic ROSHI devices that are no longer in production. The current version represents the third revision to the ROSHIwave platform, incorporating feedback from clinical users and technological refinements developed over multiple iterations.

Independent practitioners in the neurofeedback community have begun incorporating the device into their practices, noting its portability and the range of available protocols. The USB-rechargeable device operates through a click-wheel interface similar to portable media players, allowing users to navigate between different programs designed for specific cognitive states.

The ROSHIwave IN-SIGHT package includes the console unit, RGB RoshiGlasses, an RGB Ganzfeld RoshiVisor, USB charging cable, and carrying case. The device incorporates what the manufacturer refers to as perk performance technology, designed to support various cognitive functions through brainwave normalization. Users seeking meditation support tools now have access to this technology, which was previously available primarily in clinical settings.

The release of the ROSHIwave IN-SIGHT comes as interest in neurofeedback and brainwave technologies continues to grow within both clinical and consumer markets. The device is positioned as an alternative approach to traditional meditation practices, offering a technology-based method for achieving meditative states without requiring extensive training or practice.

Safety considerations for the device include a contraindication for individuals with seizure disorders. The company has implemented standard safety protocols consistent with photostimulation devices used in clinical settings.

Mindmachines.com is an online distributor of brain machines, brainwave entrainment technology, AVS stimulation devices, EEG neurofeedback equipment, mind machines and meditation machines. The company also serves as the worldwide distributor of the ROSHIwave self meditation device. Based in Dallas, Texas, and operated by Av3X LLC, Mindmachines.com specializes in brainwave entrainment technologies designed for mental performance and wellness applications. The ROSHIwave self meditation machine is currently available through the mindmachines.com website.
