

Mindmachines.com Advances Brainwave Disentrainment Technology with ROSHIwave IN-SIGHT Mind Machine

January 02, 2026

Dallas, Texas - January 02, 2026 -

Mindmachines.com has expanded its portfolio of meditation technology with the ROSHIwave IN-SIGHT Mind Machine, a portable device that employs disentrainment methods to guide users into meditative states typically achieved through years of practice. The technology represents a departure from traditional brainwave entrainment approaches by focusing on freeing neural patterns from repetitive cycles rather than synchronizing them to external stimuli.

The ROSHIwave IN-SIGHT utilizes a process called Dynamic Neuro-Activation, which works through photostimulation to normalize brainwave frequencies. The device delivers calibrated light patterns through specialized RGB-enabled glasses, offering users access to approximately 100 different protocol options designed to address various meditation and wellness objectives.

"The ROSHIwave represents a significant advancement in making meditation accessible to individuals who

struggle with traditional practices," said Fred Williams, Director of Technology at Mindmachines.com. "By utilizing disentrainment rather than entrainment, the device helps users achieve meditative states that might otherwise require extensive training or years of dedicated practice."

The technology has gained traction among clinical practitioners, with nearly 100 clinicians worldwide adopting the ROSHIwave IN-SIGHT as an alternative to classic ROSHI devices that are no longer in production. The device operates as a USB-rechargeable unit with navigation similar to click-wheel mp3 players, making it accessible for both professional and personal use.

The ROSHIwave IN-SIGHT package includes the console unit, color-changing RGB RoshiGlasses, a color-changing RGB Ganzfeld RoshiVisor, USB charging equipment, and a carrying case. The fourth iteration of the technology, known as the pROSHI 2++, was developed by Chuck Davis and represents the latest evolution in the product line.

The device addresses various applications including stress management, sleep improvement, accelerated learning, and behavior modification. Users report achieving states similar to those experienced by advanced meditation practitioners within 15-minute sessions, though individual results vary based on personal factors and consistency of use.

The technology operates by sending specially calibrated flickering light through the eyes and into the brain, a process designed to interrupt unhealthy cyclical patterns. This approach differs from conventional binaural beats or audio-based entrainment methods, focusing instead on visual stimulation pathways to influence brainwave activity.

Mindmachines.com has positioned the ROSHIwave IN-SIGHT as a tool for both individual users seeking meditation support and healthcare professionals incorporating technology-assisted wellness approaches into their practices. The device carries appropriate warnings for individuals with seizure disorders and operates within established safety parameters for photostimulation devices.

Mindmachines.com is an online distributor of brain machines, brainwave entrainment technology, AVS stimulation devices, EEG neurofeedback equipment, mind machines and meditation machines. The company also serves as the worldwide distributor of the ROSHIwave self-meditation device. Based in Dallas, Texas, and operated by Av3X LLC, the company specializes in technologies designed to enhance mental performance, wellness, and personal achievement through advanced brainwave modulation techniques.
