

Smarter Air & Electrical Expands Sunshine Coast Operations with Enhanced Air Conditioner Service and Maintenance Program

December 10, 2025

LITTLE MOUNTAIN, QLD - December 10, 2025 -

Smarter Air & Electrical has announced the rollout of its expanded air conditioner service and maintenance program across the Sunshine Coast, with additional coverage for Brisbane, the Gold Coast, Ipswich, Logan, Caboolture, and Redlands. The program aims to help households maintain reliable cooling performance and improve energy efficiency through scheduled, professional upkeep.

Operating from its Sunshine Coast base in Little Mountain, the business offers structured service appointments for ducted and split system air conditioners. Each visit includes essential maintenance tasks such as filter cleaning, performance testing, refrigerant checks, and component inspections. The program was developed in response to growing customer demand for routine servicing and the need to ensure long-term system reliability in Queensland's warm and humid conditions.

"Regular maintenance helps air conditioners run efficiently and last longer," said Davis Row, Co-Founder of Smarter Air & Electrical. "We're focused on helping customers get the most from their systems by identifying small issues before they become major repairs. This approach not only improves comfort but also supports better air quality and lower running costs."

Each service is carried out by licensed technicians who conduct detailed inspections to ensure units operate within safe and efficient parameters. The team performs checks on coils, drains, controls, and electrical components, providing clients with a clear service report outlining their system's condition. For households near the coast, the program includes additional corrosion checks to prevent salt damage to outdoor units.

Smarter Air & Electrical's maintenance offering complements its existing installation and repair services. The company holds partnerships with leading manufacturers including Mitsubishi, Panasonic, Fujitsu, and

Samsung, and supports a 10-year workmanship guarantee when systems are serviced regularly. This ensures customers benefit from consistent standards of care and long-term protection of their investment.

“Air conditioners are one of the most used appliances in Queensland homes,” said Phill Crawley, Co-Founder of Smarter Air & Electrical. “A well-maintained system performs better, uses less energy, and provides more consistent comfort throughout the year. Our program is about giving homeowners peace of mind and ensuring every system we install or service continues to operate as efficiently as possible.”

In addition to performance benefits, the program supports indoor air quality by keeping filters and ducts free of dust and allergens. Regular cleaning helps improve airflow and reduces the spread of airborne particles that can affect household health. The initiative also forms part of the company’s broader commitment to energy efficiency and environmental responsibility, encouraging homeowners to maintain systems that consume less power and reduce overall energy demand during peak seasons.

The company’s team continues to educate customers about practical maintenance habits between scheduled services. This includes checking filters during peak months, ensuring vents remain unobstructed, and setting thermostats within energy-efficient ranges. These small adjustments help households manage comfort levels more effectively while reducing unnecessary strain on the system.

Smarter Air & Electrical’s service division also supports commercial clients and property managers who require regular maintenance for multi-unit systems. These programs are tailored to meet the needs of offices, small retail spaces, and strata-managed buildings, where consistent cooling is essential for occupant comfort and productivity.

All services are completed under Queensland licensing and safety regulations. Technicians follow environmental best practices in handling refrigerants and electrical systems, reinforcing the company’s commitment to responsible service delivery. Every technician is trained to use advanced diagnostic tools that identify performance inefficiencies early, ensuring precise and informed maintenance decisions.

The company’s focus on professionalism, safety, and reliability has earned strong community recognition across South-East Queensland. Smarter Air & Electrical continues to prioritise transparent communication, punctual service, and long-term customer relationships as it broadens its reach in the HVAC sector.

The air conditioner service and maintenance program is now available for booking through Smarter Air & Electrical’s website and customer service line. With a strong reputation for reliability and customer care, the

company continues to expand its role in supporting Queensland households with dependable climate control solutions.
