Smarter Air & Electrical Announces Expansion of Split System Air Conditioner Installation Across South-East Queensland

December 10, 2025

December 10, 2025 -
Smarter Air & Electrical has announced the expansion of its split system air conditioner installation service to additional areas across South-East Queensland. The Yatala-based air conditioning contractor, known for its licensed in-house installation teams, will now extend its offering beyond Brisbane to include the Gold Coast, Redlands, Logan, and Ipswich, reflecting the rising demand for efficient cooling options in both residential and light commercial spaces.

Founded in 2019, Smarter Air & Electrical has built a reputation for delivering practical and energy-efficient climate control solutions across Queensland. The decision to broaden its split system installation coverage follows increasing requests from property owners seeking adaptable systems that suit individual room cooling and small premises. Each installation is handled by trained technicians who focus on system design, correct sizing, and compliance with Australian safety standards.

Co-founder Davis Row stated that the company?s expansion reflects its commitment to meeting the region?s changing climate needs. ?More households and small businesses are asking for effective cooling without the extensive ductwork required by larger systems,? said Davis Row. ?Split systems provide a simple and efficient way to manage comfort, and our goal is to ensure that clients across South-East Queensland have access to well-installed, long-lasting equipment.?

A split system air conditioner operates with an indoor wall-mounted unit and an outdoor compressor, connected by refrigerant piping. The setup allows temperature control in specific areas without the need for central ducts. When properly installed, such systems provide balanced airflow and reduced energy consumption. Smarter Air & Electrical?s installation process begins with a site assessment to evaluate room dimensions, insulation levels, and window exposure. This ensures that each unit selected aligns with

the client's space requirements and energy efficiency targets.

Once assessed, the company provides a fixed, itemised quote. Installations typically involve secure mounting, electrical connection, and placement of outdoor components to maintain noise and airflow compliance. A post-installation walkthrough is included, during which the client is guided through system controls, filter maintenance, and operation settings. This procedure supports longevity and maintains energy efficiency over time.

Split systems have become increasingly popular across South-East Queensland due to their ability to deliver precise cooling in homes and offices. They are especially suited to smaller dwellings, apartments, and renovations where space or layout may limit ducted options. Their inverter technology adjusts compressor speed to match temperature demand, helping reduce energy use during high-load periods. The systems are also compatible with regional energy-saving programs that reward efficient consumption.

Co-founder Phillip Crawley noted that the company?s success relies on consistency and workmanship. ?Every installation is completed by our in-house teams rather than subcontractors,? said Phillip Crawley. ?That gives us control over quality, safety, and follow-up support. Our focus has always been on doing the job right the first time and giving customers clear information about their system from start to finish.?

Smarter Air & Electrical?s expanded split system service complements its existing ducted air conditioning, repair, and maintenance operations. The company also maintains a 10-year workmanship guarantee, a commitment that reinforces accountability and long-term performance assurance. Working directly with leading manufacturers, including authorised partnerships through Mitsubishi Electric, Smarter Air & Electrical ensures that clients receive systems backed by recognised reliability and support.

The business has consistently received five-star feedback for punctuality, clear communication, and post-installation care. Customers consistently praise our attention to detail, clean work practices, and straightforward pricing. The expansion of split system installation coverage is expected to enhance accessibility for residents and business owners seeking dependable cooling options in Queensland?s subtropical conditions.

The announcement underscores Smarter Air & Electrical?s broader aim of supporting energy-conscious climate control across the state. With ongoing regional growth and rising summer temperatures, reliable installation and maintenance services remain crucial to maintaining sustainable comfort for households and workplaces alike.
