

Oekoboiler Swiss AG Advances Energy Efficient Water Heater Technology with Smart Heat Pump Solutions

December 15, 2025

Hildisrieden, LU - December 15, 2025 - PRESSADVANTAGE -

Oekoboiler Swiss AG has introduced advanced heat pump boiler systems that combine solar technology and smart controls for maximum energy efficiency in residential water heating. The Swiss manufacturer's latest systems reduce CO2 emissions while delivering reliable performance for modern homes throughout Switzerland.

The company's dual-energy systems utilize both electricity and ambient air to produce hot water, achieving energy consumption reductions of up to 80 percent compared to traditional gas or oil water heaters. These systems operate using approximately 25 percent electricity and 75 percent air to generate 100 percent of a household's hot water needs. The technology represents a significant advancement in sustainable water heating solutions for residential applications.

The Swiss-designed and manufactured systems integrate seamlessly with photovoltaic installations, allowing homeowners to maximize the use of solar energy for water heating. This compatibility aligns with Switzerland's transition toward renewable energy sources and stricter building efficiency standards. The company's products meet upcoming EnEV 2025 Energy Saving Ordinance requirements, positioning customers ahead of regulatory changes that will affect all residential water heating systems in the coming years.

Oekoboiler Swiss AG offers solutions ranging from 150-liter to 450-liter tank capacities, accommodating various household sizes and hot water demands. Each system features WiFi capability for remote monitoring and control, direct ventilation options, and PV function integration. The smart control systems allow for real-time adjustments and monitoring of energy consumption patterns. Additional information about the company can be found at <https://pressadvantage.com/organization/oekoboiler-swiss-ag>.

The heat pump technology provides additional benefits including basement dehumidification, eliminating the

need for separate dehumidifiers while preventing mold formation. This dual functionality addresses common basement moisture issues in Swiss homes while providing efficient water heating. The company maintains its operations through complete in-house design, testing, and manufacturing processes at its Swiss facilities. This approach ensures consistent product reliability and performance while supporting local manufacturing capabilities and employment.

Installation services provided by certified technicians ensure optimal system performance and efficiency from the initial setup. The company has developed specialized installation protocols that account for various building configurations and existing infrastructure. As energy costs continue to rise and environmental regulations become more stringent, heat pump water heaters represent a practical solution for both new construction and retrofit applications. The systems can be integrated into existing plumbing infrastructure with minimal modifications. Further details are available at <https://oekoboiler-swiss-ag.localo.site>.

The technology's independence from central heating systems makes it particularly suitable for low-energy buildings and renovations where traditional water heating methods prove inefficient or impractical. This flexibility allows for installation in buildings where conventional heating systems cannot be easily modified or expanded. The company's focus on consultation, quality installation, and ongoing maintenance support ensures long-term system performance and reliability throughout the product lifecycle.

Oekoboiler Swiss AG has established operations across Switzerland, providing sustainable energy solutions for residential applications since its founding. The company specializes in heat pump boiler technology that combines proven engineering principles with environmental responsibility. The manufacturer continues to invest in research and development to advance heat pump efficiency and integration capabilities. Company information and location details can be accessed at <https://maps.app.goo.gl/zBNNxGdCCBV7ZZ3C8>.
