

Maltepe Dental Clinic Advances Digital Smile Design with Premium Emax Veneers for International Patients

December 19, 2025

ISTANBUL, TR - December 19, 2025 -
Maltepe Dental Clinic, an Istanbul-based dental practice with 22 years of experience, has enhanced its digital smile design protocols and premium material offerings to meet growing demand from international patients seeking advanced cosmetic dental treatments. The clinic reports treating over 14,000 patients from more than 85 countries, with UK patients representing a significant portion of their international clientele.

The clinic's approach combines digital smile design technology with Emax Veneers, addressing concerns raised by UK dental associations about overseas dental treatment standards. Recent BBC reports indicate that 150,000 to 200,000 UK residents travel to Turkey annually for dental procedures, driven by challenges to accessing NHS services and private treatment costs that can be 60-70 percent higher in the UK.

"Digital planning has transformed how we approach smile design, particularly for international patients who travel significant distances for treatment," said Dr. Alper Gurhan, Clinical Director at Maltepe Dental Clinic. "By combining advanced imaging with premium materials like Emax veneers, we can deliver predictable,

natural-looking results that meet both aesthetic and functional requirements."

Maltepe Dental Clinic utilizes 3D facial analysis and digital mock-ups to preview treatment outcomes before any dental work begins. This technology-driven approach to cosmetic dentistry allows patients to visualize their new smile and align expectations with clinical possibilities. The clinic's in-house laboratory enables direct quality control over every restoration, from initial design to final placement.

The clinic's Emax Veneers, made from lithium disilicate ceramic, offer 10 to 15 years of durability compared to 3 to 5 years for budget alternatives. These veneers provide natural translucency that mimics real teeth, avoiding the artificial appearance sometimes associated with lower-quality materials. The same materials and techniques are standard at leading cosmetic practices in London's Harley Street and other premium UK dental facilities.

"The responsibility we have to international patients extends beyond the treatment room," noted Dr. Yusuf Ilhan, Lead Cosmetic Dentist at Maltepe Dental Clinic. "Structured aftercare and coordination with patients' home dentists are essential components of ethical international dental practice, not optional extras."

Patient case studies demonstrate the comprehensive nature of the treatment process. One Scottish patient who underwent treatment at the clinic described the experience: after a year of research, she received crowns and Emax veneers through a structured process including consultation, digital preview, preparation, fitting, and aftercare coordination.

The Turkish dental tourism market, valued at USD 184.3 million in 2024, is projected to reach USD 532 million by 2033, with cosmetic dentistry representing the fastest-growing segment. Istanbul has emerged as a leading destination for veneer treatments globally, according to industry reports.

Maltepe Dental Clinic holds international certifications, including ISO 9001:2015, ISO 13485:2016, and ISO 10002:2018, as well as an international health tourism authorization certificate. The clinic operates a consultation facility in London to provide UK patients with local assessment options before traveling to Istanbul. With over 330 Google reviews, maintaining a 4.8 rating, and authentic patient testimonials spanning more than a decade, the clinic has established a documented track record in international dental care.
