

## **Toronto Functional Medicine Centre Highlights Seven Essential IV Therapy Nutrients for Liver Health Support**

*January 10, 2026*

TORONTO, ON - January 10, 2026 - PRESSADVANTAGE -

Toronto Functional Medicine Centre has published educational information detailing seven key nutrients that may help support liver function when administered through intravenous therapy. The comprehensive guide addresses growing interest in integrative approaches to liver health maintenance and detoxification support.

The liver performs critical functions including filtering toxins, producing bile for digestion, metabolizing macronutrients, regulating blood production, and storing essential vitamins and minerals. Various factors including environmental toxin exposure, dietary habits, and genetic predisposition may impact liver health over time. The Centre's recent educational material examines how specific nutrients delivered through Toronto IV Therapy may help support these vital liver functions.

The seven nutrients highlighted include glutathione, taurine, methionine, NAD+, alpha-lipoic acid, phosphatidylcholine, and vitamin C. Each nutrient plays a distinct role in supporting liver function. Glutathione acts as a primary antioxidant in liver cells, while taurine may help with bile salt formation and toxin

elimination. Methionine serves as a precursor to other important compounds needed for detoxification processes.

NAD+ (nicotinamide adenine dinucleotide) supports cellular energy production and may help with metabolic processes in liver cells. The educational material notes that NAD+ has gained attention for its potential role in cellular health and regeneration. Alpha-lipoic acid functions as both a water and fat-soluble antioxidant, potentially helping protect liver cells from oxidative stress. Phosphatidylcholine may support cell membrane health and fat metabolism in the liver, while vitamin C provides antioxidant support and may help with collagen production.

The Centre's approach to liver support involves personalized nutrient therapy programs tailored to individual health needs. Through comprehensive assessment and laboratory testing, practitioners work to identify specific nutritional requirements and develop customized treatment protocols. This individualized approach aligns with functional medicine principles that focus on addressing root causes rather than symptoms alone.

Intravenous nutrient administration allows for direct delivery into the bloodstream, bypassing the digestive system. This method of delivery may be particularly relevant for individuals with compromised digestive function or those requiring higher nutrient concentrations than oral supplementation typically provides. The Centre notes that IV Therapy Toronto - How NAC Targets Substance Overuse represents one aspect of their broader educational initiatives on nutrient therapy applications.

The liver support nutrients discussed form part of the Centre's integrative approach to wellness, which encompasses functional medicine, naturopathic medicine, acupuncture, and bio-identical hormone treatments. Their IV therapy lounge provides a clinical setting for administering these personalized nutrient infusions under professional supervision.

Toronto Functional Medicine Centre operates from its Yorkville location, offering integrative healthcare services that combine traditional and contemporary therapeutic approaches. The facility provides various services including laboratory testing, hormone optimization programs, Traditional Chinese Medicine, herbal remedies, and nutritional support. Their three-pillar approach to wellness focuses on gut health, brain health, and hormonal balance as foundational elements of overall well-being. The Centre emphasizes education and patient empowerment through informational resources that help individuals understand various aspects of functional and integrative medicine. Visit the IV lounge clinic website or reach at (416) 968-6961, or through email at [info@tfm.care](mailto:info@tfm.care).
