

ABC Environmental Contracting Services Expands Comprehensive Restoration Solutions

December 29, 2025

Kansas City, MO - December 29, 2025 - PRESSADVANTAGE -

ABC Environmental Contracting Services, a leading asbestos removal and restoration company serving Missouri for over a decade, has expanded its comprehensive environmental and restoration services throughout the greater Kansas City metropolitan area. The expansion enables the company to provide faster response times and enhanced service coverage for both residential and commercial properties facing environmental hazards and property damage emergencies.

The expanded service area coverage comes as the company continues to see increased demand for specialized environmental remediation services, including asbestos abatement, mold remediation, and water damage restoration. With certified technicians and advanced equipment already in place, the company can now reach more communities across the Kansas City region with their 24/7 emergency response capabilities.

"Our expansion throughout the KC area reflects our commitment to protecting the health and safety of more communities across the region," said Tina Benton, Co-Owner at ABC Environmental Contracting Services. "We've built our reputation on thorough, safe remediation practices over the past ten years, and this expansion allows us to bring that same level of expertise and rapid response to a broader geographic area

when property owners need us most."

The company's comprehensive service portfolio addresses critical environmental and restoration needs, from initial inspection and testing through complete property restoration. Their asbestos removal services encompass residential and commercial properties, including specialized removal of asbestos-containing materials in tiles, siding, popcorn ceilings, and vermiculite insulation. The expansion also enhances access to their mold remediation services, which include testing, inspection, and complete removal with prevention protocols.

Water Damage KC residents and businesses now have improved access to the company's full range of water damage restoration services, including water extraction, structural drying, dehumidification, and sewage cleanup. The expanded coverage area ensures faster response times for burst pipes, flood damage, and other water-related emergencies that require immediate professional attention.

The timing of this expansion addresses growing concerns about aging infrastructure and environmental hazards in older buildings throughout the Kansas City area. Many structures built before the 1980s contain asbestos materials that pose serious health risks when disturbed or deteriorating. The company's licensed and insured technicians follow strict safety protocols and industry-approved procedures for containment and removal of hazardous materials.

Beyond emergency response, the expansion strengthens the company's ability to assist property owners with insurance claims processing and comprehensive restoration planning. Their team coordinates directly with insurance providers to streamline the claims process while maintaining focus on safe, efficient remediation and restoration work.

ABC Environmental Contracting Services maintains BBB Accreditation and employs certified technicians trained in the latest remediation techniques and safety protocols. The company specializes in asbestos removal and testing, mold remediation, content cleaning, and complete restoration services for properties affected by water damage, fire damage, and environmental hazards. Based in Blue Springs, Missouri, the company has established itself as a trusted resource for environmental contracting and emergency restoration services throughout Missouri.
