

EXPLOSIVE BASS Bluetooth Speaker by 3rd Ear Acoustics 100% New Release For Outdoors Camping Hiking Golf Cart Home Computer

June 27, 2016

June 27, 2016 - PRESSADVANTAGE -

3rd Ear Acoustics, a business in Johannesburg, South Africa, a company focused on the development of innovative, interesting and dynamic new acoustic products, recently launched a brand new product, their portable outdoor Bluetooth Incisor Diffusion (or Vibration Resonance) Speaker.

Incisor Diffusion, according to 'Digital Trends' magazine, is technology that was patented by the U.S. Navy. Whilst not exactly new, they say, it is nevertheless a relatively new phenomenon in portable Bluetooth speakers.

The principal is to use vibrations from the base of the device to transform whatever surface it rests upon into a resonator. Tables, counter tops, cracker boxes, you name it, it's a speaker. The technology is also

intended to provide much more bass response than what you'd expect from a miniature portable alone.?

This unique product puts out an incredible amount of low end force, general balance, detail, and presence?particularly for such a small device?regardless of the type of music that the user is listening to. Each element of the musical composition is rendered with clear detail and decent sustain; attributes that in this highly competitive market makes it a highly likely contender for the title 'One of the best sounding Bluetooth speakers on sale today,' or at least within the top ten.

Etienne Smit from 3rd Ear Acoustics says: ?The sound quality from this small 360-degree surround sound speaker is quite surprising when you place it on a box-shaped surface. Doing this effectively gives you a portable Bluetooth speaker with a sub-woofer, providing much more bass response than what you'd expect from a normal miniature portable. The difference this has on the sound is incredible. As a result, I'm proud to say that these small Bluetooth speakers produce exceptional quality high definition sound.?

In various presale trials that have been conducted by the company, people have commented that as outdoor speakers, they're perfect for the golf cart, for hiking, picnics, camping or even for cycling. Their handsome eye-catching egg-shaped design coupled with their smart black color have drawn favorable comments from participants at professional presentations. And on the home front, used as computer speakers, patio speakers, or mobile phone speakers, this little speaker has been voted by them as ?the Best Premium Bluetooth Speaker that, for a change, doesn't suck.? High praise indeed.

Those who have used the speakers have appreciated its crisp, powerful clear sound, and we learned that this quite sophisticated portable outdoor speaker has been engineered to keep distortion down to less than 0.5%, even on high treble female vocals. They have also stated that the device can be used both to effortlessly fill a large room with music, or used as background music during those times when the user wants to relax; still putting out clear beautiful sound.

The speaker's egg-shaped body is 3.8 inches tall and has on-board controls. Circling the equator of the rigid high density polymer frame there is a power, and a toggle switch which controls volume; play/pause as well as song search. An interesting feature is the addition of an FM radio. There's a pinpoint microphone for hands-free phone calls; a mini USB port and a standard size USB port for endless music, a multicolor light display plus a red LED indicating how much battery charge is left, and voice prompts. Apart from its comprehensive instructions, the speaker comes with a USB to mini-USB charging cable, and an Aux input cable with a 3.5mm input jack at either end.

Depending on the volume, the built in rechargeable battery is said to run for around seven hours.

3d Ear Acoustics is definitely a brand name to watch. They have a personal passion for music and therefore

focus strongly on products that deliver big time when it comes to providing quality at affordable prices. Their strong commitment to delivering excellent customer service also stands them in good stead.
