

Oekoboiler Swiss AG Advances Sustainable Water Heating Technology with Integrated Solar-Smart Systems

December 29, 2025

Hildisrieden, LU - December 29, 2025 -
Oekoboiler Swiss AG continues to lead the Swiss market in developing energy-efficient heat pump boilers that combine advanced solar technology with smart home integration capabilities. The company's innovative approach to hot water preparation addresses growing demands for sustainable building solutions while meeting stringent environmental standards.

Based in Switzerland, Oekoboiler Swiss AG has established itself as a pioneer in manufacturing water heating systems that reduce CO2 emissions by up to 80 percent compared to traditional gas or oil-powered units. The company's dual-energy technology harnesses approximately 75 percent of its energy from ambient air and only 25 percent from electricity, delivering significant cost savings for residential and commercial properties throughout Switzerland. The manufacturer's latest generation of heat pump boilers features seamless integration with photovoltaic installations, allowing property owners to maximize their solar energy investments. These systems automatically utilize surplus solar power for water heating, creating a comprehensive, sustainable energy solution that operates independently of central heating systems.

The company uses the integration of smart technology with renewable energy sources, which represents the future of sustainable building management. Their systems demonstrate that environmental responsibility and economic efficiency can work together.

Oekoboiler's product range includes models with tank volumes from 150 to 450 liters, each designed and manufactured in Switzerland to meet the country's rigorous quality standards. The systems incorporate WiFi connectivity for remote monitoring and control, direct ventilation capabilities, and advanced PV function modules that optimize energy consumption based on solar availability.

The company's commitment to sustainability extends beyond product development. Each unit undergoes extensive testing in Swiss facilities to ensure compliance with current regulations and preparation for the upcoming EnEV 2025 Energy Saving Ordinance requirements. This forward-thinking approach positions customers to meet future environmental standards without requiring system replacements or major modifications. Installation services provided by Oekoboiler Swiss AG focus on maximizing system efficiency while minimizing disruption to existing building infrastructure. The heat pump technology offers additional benefits beyond water heating, including basement dehumidification that helps prevent mold formation and eliminates the need for separate dehumidification equipment.

The Swiss manufacturer maintains comprehensive support services throughout the country, offering planning consultation, professional installation, and ongoing maintenance programs. This full-service approach ensures optimal system performance and longevity, backed by extensive warranty coverage.

Oekoboiler Swiss AG specializes in developing and manufacturing smart, energy-efficient water heaters that combine heat pump and solar technology for sustainable hot water solutions. The company serves both new construction and renovation projects throughout Switzerland, providing customized energy solutions that adapt to individual building requirements while maintaining focus on quality, efficiency, and environmental responsibility.
