

Go Industries Inc Expands Winch Grille Guard Systems with Enhanced Modular Design

January 07, 2026

Richardson, TX - January 07, 2026 -
Go Industries Inc, a Texas-based manufacturer of heavy-duty truck accessories, has expanded its winch grille guard product line with enhanced modular design features to meet growing demand from commercial fleet operators and off-road enthusiasts.

"The expansion of our winch grille guard systems reflects the evolving needs of commercial trucking operations and recreational vehicle owners who require flexible, durable protection solutions," said a Go Industries spokesperson. "Our modular approach means customers can start with a base system and add components as their requirements grow, making it a practical investment for long-term vehicle protection."

The expanded product line addresses increasing market requirements for adaptable front-end truck protection systems that can be configured for specific applications without requiring complete system replacement. The modular design allows vehicle owners to customize their protection setup by adding winch carriers and brush guards as operational needs change.

The winch grille guard system features construction from 5/16-inch laser-cut steel uprights paired with 2.5-inch 16-gauge steel cross tubes, providing robust protection against road debris and obstacles encountered in challenging driving conditions. The system accommodates either 9.5 or 16.5 winch carriers, offering flexibility for different winching requirements across various vehicle applications.

Custom heavy-duty mounting brackets are included with each system to ensure maximum strength and simplified installation. The modular design serves as a foundation that allows operators to add optional brush guards for enhanced headlight area protection from road debris and off-road brush.

The expansion aligns with industry trends toward more adaptable vehicle protection systems. Commercial fleet operators particularly benefit from the ability to standardize base protection across their vehicles while customizing individual units for specific tasks. This approach reduces inventory complexity and maintenance training requirements.

For off-road enthusiasts and work truck operators, the system provides what many consider the best winch grille guard solution due to its combination of strength, adaptability, and American manufacturing quality. The modular components allow for field modifications and repairs without requiring complete system replacement.

All components in the expanded winch grille guard system are manufactured in the United States and backed by a three-year warranty covering materials, workmanship, and finish quality. The warranty reflects the company's confidence in the durability and performance of their truck protection systems under demanding conditions.

Go Industries Inc has been serving the truck accessories market since 1978, specializing in front and back-end protection systems, custom manufacturing, and law enforcement vehicle equipment. Based in Richardson, Texas, the company maintains Platinum Status with SEMA, recognizing their commitment to quality and innovation in the automotive aftermarket industry. The company's product portfolio includes grille guards, bumper replacements, headache racks, mud flaps, and specialized equipment for law enforcement vehicles.
