ELIS Manufacturing and Packaging Solutions Highlights Expanded Stick Pack Manufacturing Capabilities

December 30, 2025

KAUFMAN, TX - December 30, 2025 -
ELIS Manufacturing and Packaging Solutions Inc. announced continued investment in and refinement of its stick pack manufacturing and packaging capabilities, reinforcing the company?s role in supporting brands seeking flexible, single-serve packaging formats across multiple industries. The announcement reflects ongoing operational development at ELIS Manufacturing and Packaging Solutions as demand grows for efficient, portion-controlled packaging solutions suitable for powders, granules, and liquid products.

The company, led by Keith Vinson, Chief Executive Officer of ELIS Manufacturing and Packaging Solutions Inc., has focused on advancing its contract manufacturing and packaging infrastructure to meet evolving market needs. Stick pack packaging has gained traction among manufacturers and product developers due to its convenience, portability, and compatibility with modern distribution channels, including retail, foodservice, and e-commerce fulfillment.

As a stick pack manufacturer, ELIS Manufacturing specializes in producing narrow, sealed packets designed for precise dosing and consistent fill accuracy. These packaging formats are commonly used for nutritional

supplements, food and beverage ingredients, pharmaceuticals, and personal care products where portion control and shelf stability are critical. The company?s manufacturing processes are structured to accommodate a wide range of product viscosities and material characteristics.

ELIS Manufacturing and Packaging Solutions has invested in equipment and quality control systems intended to support scalable production runs while maintaining compliance with applicable industry standards. Stick pack manufacturing requires careful calibration and monitoring to ensure seal integrity, accurate weight distribution, and uniform appearance, all of which are key considerations for brand owners seeking reliable contract packaging partners.

According to company leadership, the expanded focus on stick pack solutions reflects broader trends within the packaging and contract manufacturing sectors. Single-serve packaging continues to be driven by consumer preferences for convenience, hygiene, and portability, particularly in health-conscious and on-the-go product categories. Stick packs also offer material efficiency benefits when compared to larger rigid packaging formats.

Keith Vinson stated that ELIS Manufacturing and Packaging Solutions continues to align its service offerings with the operational needs of emerging and established brands. He noted that stick pack manufacturing allows companies to test new formulations, enter new markets, or diversify product lines without the overhead associated with in-house packaging operations. Vinson emphasized that the company?s role is to provide consistent, production-ready packaging support that integrates seamlessly with clients? supply chains.

The company?s stick pack manufacturing services are designed to support both short-run and high-volume production requirements. This flexibility enables clients to scale production in response to market demand while maintaining continuity in packaging specifications. ELIS Manufacturing and Packaging Solutions also works with a variety of packaging films and barrier materials to address product stability, moisture control, and shelf-life considerations.

In addition to manufacturing capabilities, the company provides integrated packaging support that includes filling, sealing, and inspection processes. These services are structured to help clients streamline their product launch timelines and reduce logistical complexity. Stick pack formats are particularly well suited for sample distribution, travel-size products, and subscription-based fulfillment models.

Industry observers note that contract manufacturers with specialized packaging capabilities are increasingly important as brands seek to optimize operations and respond quickly to changing consumer preferences. ELIS Manufacturing and Packaging Solutions? continued emphasis on stick pack manufacturing reflects this shift, positioning the company as a resource for businesses navigating competitive and regulated markets.

ELIS Manufacturing and Packaging Solutions Inc. serves a diverse client base across food, supplement, pharmaceutical, and personal care sectors. The company?s manufacturing approach emphasizes consistency, process control, and adaptability, supporting long-term partnerships with companies seeking dependable contract manufacturing and packaging services.

Further information about the company?s stick pack manufacturing and packaging capabilities is available through ELIS Manufacturing and Packaging Solutions Inc., which continues to evaluate opportunities for operational growth and service expansion in response to industry demand.
