Cool Blew Inc. Expands HVAC Financing Options to Support Energy-Efficient System Upgrades

March 23, 2026

Peoria, AZ - March 23, 2026 -
Cool Blew Inc., a Peoria-based heating and cooling services provider, has expanded its financing partnerships to help homeowners manage the costs of energy-efficient HVAC system upgrades amid rising utility rates and stricter efficiency standards. The company now offers multiple financing pathways through Wells Fargo, Ally, and Microf to accommodate varying credit situations and budget requirements.

The expansion comes as regional data indicates increased demand for flexible payment options when replacing aging heating and cooling systems. With new federal energy efficiency standards taking effect and extreme weather patterns placing additional strain on older HVAC units, many homeowners face unexpected replacement costs that can range from several thousand to tens of thousands of dollars.

"We're seeing more homeowners caught between the need for immediate system replacement and budget constraints," said Scott Proctor, Operations Manager at Cool Blew Inc. "By expanding our financing partnerships, we can offer solutions that range from traditional credit options to rent-to-own programs that require no credit check. This ensures that maintaining a comfortable, energy-efficient home remains accessible regardless of financial circumstances."

The company's Phoenix HVAC Financing program includes three distinct pathways designed to meet different customer needs. Wells Fargo's Home Projects Credit Card provides immediate access to a revolving credit line with streamlined application processes. Ally Lending focuses on affordable monthly payment structures that align with long-term household budgets. Microf's rent-to-own program eliminates credit check requirements while offering flexible payment terms.

Beyond financing for new installations, Cool Blew Inc. has structured its programs to cover emergency repairs and energy-efficient upgrades. The company also assists customers in identifying available utility rebates that can reduce overall system costs. Local utility companies currently offer rebates averaging ten cents per watt for qualifying energy-efficient installations, which can significantly offset upgrade expenses.

"The combination of financing options and utility rebates can reduce the effective cost of a new system by 20 to 30 percent," added Proctor. "More importantly, modern energy-efficient systems typically reduce monthly utility bills by 15 to 25 percent, which helps offset financing payments while improving home comfort and air quality."

These financing options become particularly critical during peak summer months when system failures can create health and safety concerns. The company has noted an increase in emergency HVAC in Peoria calls during recent heat waves, with many involving systems that homeowners had delayed replacing due to cost concerns.

The expanded financing program also addresses the growing complexity of modern HVAC systems, which increasingly incorporate smart thermostats, advanced filtration, and variable-speed components. These technologies offer superior efficiency and comfort but require higher initial investments that many homeowners struggle to manage without financing assistance.

Cool Blew Inc., established in 2002, provides comprehensive heating, cooling, plumbing, and solar services throughout the Phoenix metropolitan area. The company maintains a fleet of fully-equipped service vehicles and employs certified technicians trained in the latest diagnostic and repair techniques. As a factory-authorized dealer for multiple HVAC brands, the company specializes in energy-efficient solutions designed to reduce long-term operating costs while maintaining optimal indoor comfort.
