

Mindmachines.com Introduces Advanced Meditation Technology for Enhanced Mental Performance

January 12, 2026

Dallas, Texas - January 12, 2026 - PRESSADVANTAGE -

Mindmachines.com has introduced the third generation of its ROSHIwave IN-SIGHT Mind Machine, a device that utilizes Dynamic Neuro-Activation technology to help users achieve meditative states through advanced brainwave modulation. The device represents a significant development in neurofeedback technology, offering approximately 100 different protocol options for various mental wellness applications.

The ROSHIwave IN-SIGHT employs a proprietary process called brainwave disentrainment, which differs from traditional entrainment methods by allowing the brain to normalize its own patterns rather than forcing it into predetermined states. Through photostimulation, the device delivers precisely calibrated light patterns via specialized RGB LED glasses that influence neural activity, helping users achieve states of deep relaxation and mental clarity typically associated with experienced meditation practitioners.

The device incorporates the pROSHI 2++ protocols, expanding its applications beyond basic relaxation to include enhanced learning capabilities, improved sleep quality, and peak performance optimization.

Corporate wellness programs and educational institutions have begun integrating these devices into their offerings, recognizing the potential benefits for employee productivity and student performance.

"The ROSHIwave IN-SIGHT represents a significant advancement in meditation technology, providing users with a practical tool to achieve meditative states that might otherwise require years of dedicated practice," said Fred Williams, a spokesperson from Mindmachines.com. "By utilizing brainwave disentrainment rather than traditional entrainment methods, the device allows for a more natural and individualized approach to mental wellness."

Nearly 100 clinicians worldwide have adopted the technology as an alternative to classic ROSHI devices that are no longer in production. Independent practitioners in the neurofeedback community have also incorporated the device into their practices, utilizing its diverse protocol options for various therapeutic applications.

The ROSHIwave IN-SIGHT features a USB-rechargeable design and operates through an intuitive click-wheel interface similar to portable media players. The complete package includes the console unit, RGB Roshiglasses, an RGB Ganzfeld Roshivisor, USB charging cable, and carrying case. Safety protocols consistent with photostimulation devices used in clinical settings have been implemented, including contraindications for individuals with seizure disorders.

The release comes as interest in neurofeedback and brainwave technologies continues to grow within both clinical and consumer markets. The device offers an alternative approach to traditional meditation practices, providing a technology-based method for achieving meditative states without requiring extensive training or practice.

Mindmachines.com is an online distributor of brain machines, brainwave entrainment technology, AVS stimulation devices, EEG neurofeedback equipment, mind machines and meditation machines. The company also serves as the worldwide distributor of the ROSHIwave self meditation device. Based in Dallas, Texas, and operated by Av3X LLC, Mindmachines.com specializes in brainwave entrainment technologies designed for mental performance and wellness applications.
