

Mindmachines.com Announces Enhanced ROSHIwave as Meditation Device with Advanced Brainwave Technology

February 02, 2026

Dallas, Texas - February 02, 2026 -
Mindmachines.com has announced enhancements to its ROSHIwave IN-SIGHT Mind Machine, incorporating advanced brainwave disentrainment protocols designed to achieve meditation states typically associated with experienced practitioners. The third-generation device utilizes Dynamic Neuro-Activation technology, a proprietary system developed by the company for meditation applications.

"The ROSHIwave represents an advancement in meditation technology," stated Fred Williams, spokesperson for Mindmachines.com. "The device incorporates extensive research into brainwave patterns and photostimulation techniques to guide users to normalized brain states through sessions that typically last 15 minutes."

The enhanced ROSHIwave employs calibrated light patterns delivered through RGB LED glasses to influence brainwave frequencies. The technology uses a disentrainment approach, which differs from

traditional entrainment methods by dispersing repetitive mental patterns rather than synchronizing the brain to specific frequencies. The best meditation device in the company's portfolio addresses growing market demand for technology-assisted meditation tools.

The updated device features modified navigation systems and expanded protocol options. Applications include stress management support, learning enhancement programs, and behavioral modification assistance. Users can adjust the color output of the glasses through button controls, allowing one pair of glasses to accommodate multiple configurations from the original pROSHI neurodynamic activator glasses series.

The technology addresses the market for non-invasive methods to achieve altered states of consciousness and Ganzfeld effects. The device includes classic ROSHI-style protocols that have undergone research, plus newly developed multiplexed versions. These additions allow the personal ROSHI emulator to address various user applications, from stress management to cognitive training programs.

The roshi wave technology operates by transmitting calibrated flickering light through the eyes and into the brain. This process, termed brainwave disentrainment through photostimulation, differs from conventional meditation aids that utilize audio frequencies or guided imagery. The company notes that individuals with seizure disorders should not use the device.

Regarding the technology's development, the company indicates that Dynamic Neuro-Activation and brainwave disentrainment are proprietary terms used to describe their specific implementation of photostimulation technology. The device is positioned as a wellness tool for general stress management and cognitive enhancement applications rather than as a medical device.

The ROSHIwave joins other photostimulation devices in the meditation technology market, which includes various light and sound machines utilizing similar principles. Industry standards for such devices continue to develop as the market expands.

Mindmachines.com is an online distributor of brain machines, brainwave entrainment technology, AVS stimulation devices, EEG neurofeedback equipment, mind machines and meditation machines. The company serves as the worldwide distributor of the ROSHIwave self-meditation device. The ROSHIwave self meditation machine is currently available through the mindmachines.com website.
