KEGE Center for ADHD Receives High Patient Ratings Reflecting Commitment to Accuracy and Compassionate Care

January 06, 2026

GILBERT, AZ - January 06, 2026 -
KEGE Center for ADHD has announced the achievement of consistently high patient satisfaction ratings across its clinical services in Arizona. The psychiatric practice, which specializes exclusively in ADHD evaluation and coordinated care, has received more than two hundred verified patient reviews, with the vast majority reflecting five-star experiences. The strong response from patients highlights the impact of KEGE Center?s evidence-based, patient-centered approach in an area of mental health often defined by short consultations and inconsistent diagnostic standards.

Founded by Keith Getic, MSN, PMHNP-BC, a board-certified psychiatric nurse practitioner with specialized ADHD training, KEGE Center for ADHD was established to close long-standing gaps in ADHD diagnosis and follow-up care. The practice?s approach is built on a foundation of comprehensive evaluation, validated measurement tools, and an empathetic understanding of the challenges faced by individuals and families living with ADHD.

According to Keith Getic, MSN, PMHNP-BC, the growing volume of positive feedback underscores the value

of thorough assessment and partnership in treatment. ?When someone walks into our practice after years of being misunderstood or misdiagnosed, the first step is simply listening,? said Keith Getic, MSN, PMHNP-BC. ?Every patient deserves to be seen and heard. The strong feedback we?ve received reflects not just satisfaction, but trust in a process that is transparent, collaborative, and guided by clinical rigor.?

Patients frequently cite that difference as the defining feature of their experience. Reviews consistently mention longer appointment times, attentive communication, and the clarity of results following the center?s 90-minute Gold Standard evaluation. The evaluation process follows the diagnostic standards outlined by the American Psychiatric Association and the American Academy of Pediatrics and includes multiple sources of input such as standardized rating scales, patient interviews, and collateral feedback from family members or educators when relevant.

In one verified review, a patient shared, ?After years of frustration, this was the first time I truly felt heard and understood. Their evaluation changed everything.? Another reviewer wrote, ?I had seen several providers before finding KEGE Center. Within weeks, I finally understood what was happening and had a plan that made sense.? A parent describing their family?s experience noted, ?My son went from struggling in school to enjoying learning again. The evaluation was so detailed, and the follow-up support made all the difference.?

Many of these reviews also highlight the communication and accessibility of the practice?s care systems. KEGE Center?s custom-built digital tools, KEGE Connect and KEGE Bridge play a key role in patient engagement and coordination. KEGE Connect serves as an ADHD-friendly online portal where patients can manage scheduling, secure messaging, and medication refill requests through clear, step-by-step navigation. KEGE Bridge streamlines the feedback process between teachers and providers, reducing delays in gathering input that is essential for accurate diagnosis in children and adolescents.

Another patient remarked on the ease of communication, stating, ?The online portal is simple and intuitive. I can message my provider and track everything without feeling overwhelmed.? Reviews also describe rapid response times and careful coordination with pharmacies, reflecting a level of operational efficiency that supports ongoing treatment.

Patients frequently describe KEGE Center as a place that combines professionalism with compassion. In one testimonial, a reviewer shared, ?The staff took time to explain every detail. It never felt rushed. I finally felt like someone cared about getting it right.? Another patient commented, ?I?ve been to several clinics before, but this is the first time I felt part of the process. The providers worked with me, not just for me.? These statements echo a consistent theme across the center?s reviews: that care at KEGE is delivered through partnership and respect rather than prescription alone.

Keith Getic, MSN, PMHNP-BC attributes this reputation to the practice?s commitment to

Measurement-Based Care, an approach that uses validated tools to track patient progress over time. ?We measure outcomes at every follow-up appointment,? he explained. ?When treatment adjustments are made, they?re based on data, not guesswork. Patients appreciate that level of transparency because they can see their progress in real terms.?

That focus on measurable progress also extends to the provider-patient relationship. Reviews frequently describe the sense of empowerment patients experience after understanding how ADHD affects daily life and how targeted interventions can make it manageable. One reviewer described it as ?the first time I felt like I had the owner?s manual to my own brain.? Another shared, ?I used to dread appointments because they never led anywhere. Here, every visit feels like a step forward.?

KEGE Center?s strong reputation has also made it a referral choice among educators and professionals seeking specialized ADHD evaluation. Parents often note the relief of working with a team that collaborates directly with schools and takes the time to explain findings in a way that can be applied to classroom strategies and home routines. Adults with ADHD describe a similar sense of relief, citing clear explanations, personalized medication management, and respect for their autonomy in decision-making.

?Each review tells a story of what happens when care is both accurate and compassionate,? said Keith Getic, MSN, PMHNP-BC. ?The feedback we receive reinforces our belief that when providers take the time to listen, use validated tools, and coordinate care effectively, patients notice the difference. These reviews are not just numbers, they are evidence that clinical precision and empathy can coexist.?

The consistent volume of positive feedback continues to strengthen the center?s standing among patients across Arizona. Reviews collected since early 2024 indicate sustained satisfaction with both in-person and telehealth services, reflecting the accessibility of KEGE?s statewide care model. The practice?s continued focus on long-term outcomes and follow-up support aligns with its broader mission to set a new benchmark for ADHD care in Arizona.

The recognition from patients also supports KEGE Center?s advocacy for higher diagnostic standards within the field of psychiatry. By maintaining a commitment to comprehensive evaluation, the center demonstrates that a longer, evidence-based approach can lead to greater accuracy and more effective care plans. The result, reflected in hundreds of verified reviews, is a growing trust among families, students, and professionals who once struggled to find reliable answers.

KEGE Center for ADHD is a psychiatric practice specializing in ADHD evaluation, medication management, and coordinated care for patients across Arizona. All providers are board-certified psychiatric nurse practitioners with advanced ADHD training. The practice is recognized for its Gold Standard 90-minute evaluations, validated diagnostic tools, and its ongoing use of Measurement-Based Care to ensure continued

progress and accountability in every treatment plan.
