

EggNest.ai Launches Human-Led AI Services Firm - Powered by Glean

February 03, 2026

Grand Junction, Colorado - February 03, 2026 - PRESSADVANTAGE -

EggNest.ai announced its official launch today, introducing a new model for enterprise AI adoption that combines strategy, implementation, and automation?powered by the Glean platform and guided by experienced practitioners. Built by seasoned technology operators, EggNest.ai helps organizations implement, extend, and adopt the Glean platform - turning enterprise AI into a practical capability.

Founded by Rob Eggebrecht in summer 2025, the firm is built on what the company describes as decades of experience leading global services organizations and a shared commitment to customer success. According to the company, their background in data protection, governance, and information resilience provides a foundation for helping customers adopt AI securely and responsibly.

As organizations shift from experimentation to real AI operations, EggNest.ai representatives indicate the need for experienced practitioners has never been higher?creating the moment EggNest.ai was built for. "We're operators at heart," said Rob Eggebrecht, Principal at EggNest.ai. "Our focus is straightforward -

deliver excellent work, serve customers well, and help them realize the value of AI in a way that fits their business."

"We're seeing the enterprise AI market mature quickly - customers are asking less about what AI can do, and more about how to deploy it responsibly and at scale," said Zubin Irani, VP of Partnerships at Glean. "As enterprises standardize on platforms like Glean for intelligent search, AI assistance, and agents across the enterprise, the focus turns to scaling adoption. Operator-led partners like EggNest.ai help customers extend Glean's value through real-world implementation, enabling practical, measurable, and lasting AI outcomes."

EggNest.ai is a certified partner of Work AI leader Glean, leveraging its platform to unify knowledge, workflows, and teams. The partnership extends beyond deployment, as EggNest.ai builds custom connectors, data-exchange architectures, prompt libraries, and agent-based workflows that integrate Glean into broader enterprise ecosystems, always grounded in secure design and responsible data practices according to company representatives.

EggNest.ai plans to continue investing deeply in the Glean ecosystem as the platform evolves, with the goal of becoming one of the most experienced Glean services teams in the industry.

The team began building EggNest.ai in the summer of 2025 and commenced formal operations on October 1, 2025. According to the company, in its first 90 days, EggNest.ai has completed multiple Glean deployments across healthcare, professional services, and mid-market industries.

Since launch, EggNest.ai reports it has formalized its partnership with Glean, grown to a 15-member team, launched operations from a delivery center in Grand Junction, integrated multiple agentic workflows into its own business operations, and completed its Series Seed funding round.

As the company grows, EggNest.ai plans to continue expanding its service delivery team and deepening its AI-driven business operations. The company also plans to partner with value-added resellers, global system integrators, and established service providers, enabling them to bring EggNest.ai's portfolio of AI enablement and data-driven intelligence services to their customers. Consistent with the team's history of scaling secure operations, EggNest.ai intends to pursue global expansion to meet customer demand according to company representatives.

"Today marks an exciting moment for all of us at EggNest.ai," said Rob Eggebrecht. "We're a grounded group?passionate about service, endlessly curious about technology, and relentlessly driven to exceed expectations. We thank everyone who has supported us so far and look forward to an incredible journey into the future of AI and human-led services."

EggNest.ai helps organizations operationalize AI through a blend of strategy, implementation, and automation services powered by the Work AI leader Glean's platform. With roots in data protection, information governance, and secure service delivery, the company brings a foundation to AI initiatives. Headquartered in Grand Junction, Colorado, EggNest.ai is committed to advancing secure, human-led AI adoption. Learn more at www.eggnest.ai
