

Vispring Showroom Highlights Handmade Mattresses in San Diego

January 13, 2026

LA JOLLA, CA - January 13, 2026 - PRESSADVANTAGE -

The Vispring showroom is presenting a selection of handmade mattresses in San Diego, built with traditional upholstery methods and natural fiber fillings. The display focuses on how mattress construction, materials, and sizing options influence sleep comfort, temperature regulation, and long-term support, with an emphasis on what can be observed and compared in person rather than broad claims about outcomes.

Vispring mattresses are handcrafted in England, with each model assembled through a process that combines stitched natural fillings with spring systems designed to distribute weight across the surface. Construction varies by model, but the approach typically relies on layered fibers such as British wool, cotton, silk, cashmere, and horsehair. These materials are used for practical reasons that can be measured and felt: airflow through fibrous layers, moisture management, and the way different fillings compress and recover over time.

A central feature of many Vispring models is the pocket spring unit. Unlike connected spring grids that move as a single structure, pocket springs are housed in individual fabric pockets so each spring can respond with less influence from adjacent springs. In use, this can change how movement is absorbed across the surface and how support is delivered to areas that carry more pressure, such as shoulders and hips. Several models add complexity by stacking spring layers or combining spring counts and gauges to create different firmness profiles, which can be compared side-by-side in the showroom.

Mattress feel is often described in simple terms—soft, medium, firm—but the showroom presentation takes a more technical view of what creates those differences. Fillings such as wool and cotton tend to compress differently than horsetail horsehair, and the spring unit beneath can shift the overall sensation from buoyant to more stable. Edge support, surface conformity, and the speed at which the top layer rebounds after pressure are also factors that vary across models. In practice, these details matter for sleepers who change positions frequently, share a bed, or prefer a specific balance between cushioning and alignment.

San Diego's climate adds another variable: nighttime temperature swings, humidity changes near the coast,

and warm seasons that can make heat retention more noticeable. Natural fiber layers can influence how heat and moisture move away from the body, and the internal structure of a mattress—particularly the space around springs and the permeability of fillings—can affect ventilation. The showroom materials explain how airflow pathways are created in different builds, including the role of tufting and hand-side stitching in stabilizing layers without sealing them into a less breathable block.

Sizing and configuration are another focus. Vispring San Diego supports made-to-measure dimensions for rooms and frames that do not match standard U.S. sizes. This includes length or width adjustments for custom bed platforms, unusual room layouts, or specialty frames. For larger handmade mattresses in San Diego, split tension configurations are available, allowing each side to be built with a different firmness specification. This approach addresses a common household reality: two sleepers often prefer different levels of support, and a single uniform firmness can become a compromise that satisfies neither.

The showroom experience is structured around comparison rather than a single “correct” choice. Models are laid out to make it easier to notice construction differences: the height of the mattress, the feel at the edge, the response under the hips and shoulders, and the way the surface changes when weight is shifted. Staff guidance is oriented toward practical fit—sleep position, body weight distribution, sensitivity to motion transfer, and temperature preferences—without requiring technical knowledge from visitors. Materials used in each model are typically listed so that fiber blends and spring specifications can be matched to comfort preferences in a straightforward way.

Durability and materials sourcing are also addressed as product characteristics rather than talking points. Vispring’s build methods are intended to maintain structure under repeated compression, with tufting and stitching designed to keep fillings evenly distributed over time. The showroom information notes the use of natural fibers, many of which are biodegradable, and describes sourcing practices that prioritize established supply chains for wool and other upholstery materials. Longevity is presented as a construction objective tied to how materials are layered and secured, not as a promise about any specific lifespan.

Accessories displayed alongside mattresses—such as toppers and protective covers—are framed as tools for adjusting feel and preserving surface condition. Toppers can alter the initial contact layer, changing how a mattress feels without changing the internal spring unit. Protective covers can help reduce wear from everyday use. These add-ons are presented in the context of maintenance and comfort tuning rather than upgrades.

Vispring as a brand has a long history in mattress manufacturing, and the San Diego showroom references that heritage primarily through production methods and recognition. Vispring states that it received the Queen’s Award for Enterprise in 2012, an award that recognizes achievements in areas including international trade, innovation, or sustainable development. The brand also reports distribution across

multiple countries through a network of retail partners.

In a category often dominated by compressed shipping formats and simplified material lists, the Vispring San Diego showroom positions mattress construction as something that can be inspected and understood. The emphasis remains on how design choices—spring independence, fiber layering, stitching methods, and sizing flexibility—translate into differences that are noticeable during in-person evaluation. The result is a showroom experience centered on comparing build types and selecting specifications that align with real-world sleep preferences and bedroom constraints.

About Vispring San Diego:

After decades of innovation and countless bespoke mattresses, Vispring was given the Queen's Award for Enterprise in 2012. The award honors any business that has excelled in the fields of international trade, innovation, or sustainable development. It's one of our proudest achievements.

Today, Vispring beds are found in 50 countries and stocked by over 500 stores. The perfect night's sleep is available to more people than ever before. But as we grow and evolve, we stay true to what we've always stood for—luxury, bespoke beds that are handmade just as they were over 100 years ago.
