

A&M Roofing Announces Enhanced Certification Standards for McLean Roof Installation Services

January 26, 2026

MCLEAN, VA - January 26, 2026 -

A&M Roofing, a McLean-based roofing contractor, announced today that all installation crews have completed advanced certification training programs as part of updated service protocols for residential and commercial properties throughout Northern Virginia. The initiative reflects evolving industry standards and building code requirements that took effect in 2024.

The company's certification program encompasses HAAG-certified roof inspection protocols, manufacturer-specific installation training, and updated safety compliance measures. These certifications apply to all roof installations in McLean, VA, projects undertaken by the company's technical teams.

"The roofing industry has seen significant changes in material technology and installation standards over the past two years," said Mark Collins, a spokesperson from A&M Roofing. "Our certification initiative ensures that every technician working on McLean properties meets current industry requirements and understands the latest installation methodologies for various roofing systems."

The certification standards cover multiple roofing systems, including asphalt shingle, metal, slate, and flat roof applications. Each system requires specific installation techniques and material handling procedures that align with manufacturer warranties and local building codes. The company's technicians complete between 40 and 60 hours of training annually to maintain these certifications.

Northern Virginia's climate presents specific challenges for roofing installations, including temperature variations, humidity levels, and storm exposure. The updated protocols address these regional factors through material selection guidelines and installation timing recommendations. Properties in McLean and surrounding areas experience an average of 42 inches of annual rainfall and temperature fluctuations exceeding 70 degrees Fahrenheit between seasons, factors that influence roofing material performance and installation procedures.

A&M Roofing's inspection services now incorporate digital documentation systems that create detailed reports for property owners. These reports include photographic evidence, measurements, and technical assessments that identify areas requiring attention. The HAAG certification held by the company's inspection technicians represents an industry-recognized standard for storm damage assessment and roofing system evaluation.

The company provides Roofing McLean VA services across multiple property types, from single-family residences to commercial buildings. Each property type requires different approaches to installation, with commercial properties often featuring flat or low-slope systems that demand specialized waterproofing techniques. Residential properties in the McLean area commonly feature architectural shingle or slate systems that require precise installation to maintain manufacturer warranties.

Beyond roofing installations, the company's service scope includes gutter systems, siding applications, and exterior door and window installations. Each service area maintains separate certification requirements and follows specific installation protocols established by product manufacturers and industry associations.

The roofing industry in Northern Virginia has experienced steady growth, with permit data showing a 15 percent increase in roof replacement projects over the past three years. This growth corresponds with aging housing stock in established neighborhoods and increased awareness of energy-efficient roofing materials that can reduce cooling costs.

About A&M Roofing

A&M Roofing is a licensed roofing contractor based in McLean, Virginia, serving Northern Virginia for over twenty years. The company specializes in roof installation, replacement, and maintenance for residential and commercial properties. Technical teams hold HAAG certifications for inspection services and manufacturer certifications for various roofing systems.
