

Boston Men Explore ?Daddy Do Over? Procedures at Clareo Plastic Surgery

January 12, 2026

CHESTNUT HILL, MA - January 12, 2026 - PRESSADVANTAGE -

Today, men increasingly seek cosmetic procedures that align with active lifestyles, demanding careers, and long-term health goals. Clareo Plastic Surgery is seeing growing interest in so-called ?Daddy Do-Overs? in Boston, reflecting a broader shift in how men approach aesthetic care. Men are prioritizing subtle refinement that supports fitness, confidence, and overall well-being.

A Daddy Do-Over is a customized combination of cosmetic procedures designed to address physical changes that may occur with age, stress, weight fluctuations, or reduced time for exercise. For many fathers, these changes include stubborn abdominal fat, reduced muscle definition, loose skin, or gynecomastia. A Daddy Do-Over will result in a more athletic or chiseled body - but can also include facial enhancements as well. Facial refinement is an important part of a Dadd Do-Over, adding volume, fat, or implants to certain areas and reducing fat in other areas, such as the cheeks or neck, can give a more youthful, confident, athletic look.

Clareo Plastic Surgery, based in the Boston area, has seen increased demand for male-focused procedures that prioritize precision and discretion. The practice's surgeons, Dr. Michael Tantillo and Dr. Christopher Lee,

are board-certified and have more than two decades of experience in cosmetic surgery. Their work with male patients centers on individualized planning, careful anatomical assessment, and techniques designed to preserve function and movement.

Among the most common components of a Daddy Do-Over are body contouring procedures such as liposuction of the abdomen and flanks, fat transfer to muscle (Muscle Makeover), gynecomastia correction, and skin tightening. These are often selected to complement existing fitness routines rather than replace them. Many patients pursue cosmetic care after reaching a plateau through diet and exercise alone, particularly when time constraints limit training or recovery.

Gynecomastia surgery has become one of the most frequently requested procedures among fathers seeking a Daddy Do-Over in Boston. Hormonal changes, weight gain, and genetics can all contribute to the development of excess breast tissue in men, which may persist despite weight loss. Surgical correction can address both glandular tissue and fat, creating a flatter, more contoured chest while maintaining a natural masculine shape.

Another area of interest is abdominal contouring. Even highly active men may experience fat deposits or loose skin around the midsection over time. Liposuction, sometimes combined with skin-tightening techniques, can refine the waistline without creating an artificial appearance. These procedures are often planned with consideration for athletic movement and long-term results, rather than short-term cosmetic changes.

Some fathers also explore fat transfer techniques as part of their overall treatment plan. Fat harvested during liposuction can be strategically placed to enhance muscle definition or improve contour in specific areas. This approach allows for subtle enhancement using the body's own tissue, reducing reliance on synthetic materials and supporting a more natural look. Clareo is one of the only providers in the Boston area of this procedure for men, known as Muscle Makeover.

Clareo Plastic Surgery emphasizes consultation and education as central parts of the process. Patients typically undergo a detailed evaluation that considers body composition, lifestyle demands, and recovery expectations. Many fathers seek procedures that allow a relatively quick return to work and family responsibilities, making recovery planning an essential part of treatment selection.

The rise in Daddy Do-Over procedures also reflects changing cultural attitudes around men's health and appearance. Cosmetic surgery is no longer viewed as a niche interest, but rather as one component of personal care, similar to fitness, nutrition, and preventive health. For fathers balancing careers, parenting, and personal goals, cosmetic procedures are increasingly seen as tools to support confidence and physical comfort rather than vanity.

Privacy and discretion remain important factors for many male patients. Procedures are often planned to minimize visible scarring and downtime, allowing individuals to resume daily activities without drawing attention. Advances in surgical techniques and anesthesia have made outpatient procedures safer and more predictable, contributing to growing acceptance among male patients.

The goal is often to look healthier, stronger, more athletic, or more rested.

As interest continues to grow, Daddy Do-Overs are likely to become a standard part of male cosmetic care in the Boston area. The trend highlights a shift toward practical, outcome-focused aesthetics that fit seamlessly into busy family and professional lives. By prioritizing safety, proportion, and long-term results, practices like Clareo Plastic Surgery are responding to the evolving needs of modern fathers seeking thoughtful, informed cosmetic care.

About Clareo:

Clareo specializes in a wide range of cosmetic procedures tailored to enhance natural beauty. From subtle refinements to comprehensive transformations, the practice focuses on patient-specific results that support confidence, wellness, and long-term satisfaction.
