

Pain Management & Rehab Center Expands Chiropractor Services to Meet Growing Demand for Non-Invasive Pain Relief

January 27, 2026

January 27, 2026 -

Pain Management & Rehab Center has expanded its chiropractic care services to address the increasing demand for non-invasive pain relief options in the Greater Springfield area. The comprehensive rehabilitation facility, which maintains a 4.9 out of 5 rating based on patient reviews, has enhanced its collaborative treatment approach to better serve patients seeking alternatives to traditional pain management methods.

The expansion comes as more patients seek drug-free solutions for chronic pain conditions, particularly those resulting from car accidents and workplace injuries. The center's integrated approach combines chiropractic services with medical evaluation, muscle therapy, massage therapy, and diagnostic imaging to create personalized treatment plans for each patient.

"The demand for non-invasive pain management has grown significantly over the past year as patients

become more aware of the long-term benefits of chiropractic care," said Harry Brooks, Director of Clinical Services at Pain Management & Rehab Center. "Our expanded services allow us to treat a wider range of conditions while maintaining our commitment to collaborative, patient-centered care that addresses the root causes of pain rather than just the symptoms."

The Pain Management & Rehab Center chiropractor team specializes in treating mechanical disorders of the musculoskeletal system, with particular expertise in spine-related conditions. The expanded services include advanced techniques for treating back pain, neck pain, headaches, and joint disorders, as well as specialized care for auto accident injuries including whiplash and soft tissue damage.

The center's collaborative treatment model sets it apart from traditional single-practitioner offices. Patients benefit from a coordinated team approach where chiropractors work alongside massage therapists and other healthcare professionals to develop comprehensive recovery plans. This integrated methodology has proven particularly effective for patients recovering from car accidents, who often require multiple therapeutic interventions to achieve optimal outcomes.

Recognizing that accessibility remains a barrier to treatment for many patients, the center offers complimentary transportation services and maintains flexible scheduling with same-day appointments and walk-in availability. The facility accepts various insurance plans and employs specialized billing staff experienced in third-party billing and coordination of benefits.

The expansion also addresses the growing need for urgent care services for auto accident victims. The center provides immediate evaluation and treatment for accident-related injuries, utilizing on-site X-ray services for rapid diagnosis and treatment planning. This comprehensive approach helps patients begin their recovery process promptly while ensuring proper documentation for insurance purposes.

Pain Management & Rehab Center has served the Springfield, Massachusetts community for several years, establishing itself as a leading provider of integrated pain management and rehabilitation services. The facility offers medical evaluation, muscle therapy, chiropractic services, massage therapy, X-ray services, and urgent care for car accidents. Located on Belmont Avenue in Springfield, the center operates Monday through Friday with extended hours on Thursdays to accommodate working patients.
