

# Soraban Completes SOC 2 Type II Audit, Validating Security Controls Across Real-World Tax Workflows

*January 29, 2026*

SAN FRANCISCO, CA - January 29, 2026 - PRESSADVANTAGE -

Soraban, the intelligent tax workflow and automation platform built for accounting firms, today announced the successful completion of its SOC 2 Type II audit with Darata, evaluating the effectiveness of its security controls over an extended period of real-world use, including peak tax season workloads and day-to-day operational activity.

This milestone builds on Soraban's previous SOC 2 Type I audits, marking a deliberate, ongoing investment in security as the platform supports more firms, more returns, and higher volumes of sensitive tax data each season.

"Security isn't a checkbox for us - it's part of how we earn trust from accountants and their clients every single day," said Vivek Chopra, Head of Engineering at Soraban. "Completing SOC 2 Type II shows that our controls don't just exist on paper - they hold up across live tax workflows, real usage spikes, and day-to-day operations."

Why does this matter for accounting firms? Accounting teams handle some of the most sensitive personal and financial information there is. As client expectations rise and workflows become more automated, firms need confidence that the tools moving data through their firm are built with security at the core - and proven under real operating conditions, not just internal testing.

Soraban's SOC 2 Type II audit confirms that the platform is built to support real-world tax season demands. This includes higher system capacity to support heavier workloads without slowdowns, smarter data systems that maintain consistent speed during usage spikes, geo-redundant database infrastructure designed for resilience and uptime, and enhanced monitoring and security controls aligned with SOC 2 standards.

Together, these investments help ensure that firms can rely on Soraban during their busiest weeks - not just in theory, but in practice during real tax season demand.

Soraban is purpose-built to remove bottlenecks across intake, data movement, and delivery ? without forcing firms to rip and replace their existing tools. Security that supports how accountants actually work is embedded across this entire flow, from passwordless client intake to automated data handling and delivery.

The SOC 2 Type II audit evaluated controls related to data protection and access management, system monitoring and incident response, and operational consistency across the Soraban platform.

For Soraban, security is an ongoing commitment. The completion of SOC 2 Type II reflects Soraban?s broader security roadmap, not a finish line. As regulatory expectations evolve and firms rely more heavily on automation, Soraban continues to invest in processes, infrastructure, and independent validation that match the responsibility of handling tax data at scale. This includes regular third-party assessments, internal security reviews, and continued investment in infrastructure that scales with the volume and sensitivity of tax data firms trust Soraban to handle.

?Our customers trust us with their workflow and their reputation,? added Enoch Ko, Founder & CEO of Soraban. ?We take that seriously ? and we?ll keep proving it.?

About Soraban:

Soraban is the most trusted and intelligent tax workflow automation platform that powers modern accounting firms. Purpose-built for accountants and admins and battle-tested through 5 tax seasons, Soraban understands the pain. Soraban takes on tasks from client data collection, organizing workpapers, automating data entry to your tax software, and the final delivery to your client.
