# Brinton Vision Announces Publication Highlighting Significant Industry Honors and Clinical Contributions

*January 23, 2026*

ST. LOUIS, MO - January 23, 2026 -

Brinton Vision today announced the release of its new article, "Have Any LASIK Surgeons in St. Louis Won Awards or Recognitions?," detailing the awards, recognitions, and professional distinctions earned by both the clinic and its founder, Dr. Jason P. Brinton. The article outlines why recognitions from industry organizations, medical publications, and community voting groups provide meaningful insight into clinical quality, surgical outcomes, and long-term leadership in refractive surgery. This announcement underscores ongoing public interest in reliable measures of excellence in ophthalmology as patients across the United States seek trusted providers for vision correction.

The article reports that Brinton Vision has earned multiple honors across Missouri and the St. Louis region, including the STL Headliner Award for Best LASIK and Vision Correction Surgery in consecutive years and placement as Missouri?s Best Laser Eye Center through statewide voting. Brinton Vision has also been named the No. 1 LASIK center on St. Louis Magazine?s A-List across several years, along with recognition for overall patient experience through the Headliner Awards. These distinctions reflect consistent performance over time and reinforce the value of third-party evaluation as refractive surgery continues to advance through new technology and evidence-based care.

Dr. Jason Brinton?s individual recognitions are also outlined in the new article, including acknowledgement from Castle Connolly?s Top Doctors in America and designation among America?s Top Ophthalmologists through the Consumer Research Council of America. Beyond national listings, the publication highlights his inclusion in the Leading Physicians of the World roster and his international Visian ICL Young Ophthalmologist Award, which recognized early leadership in implantable lens innovation. Dr. Brinton?s selection to the Premier Surgeon 300 Innovators by Ocular Surgery News is also detailed, underscoring his role in shaping refractive and cataract surgery advancements.

A significant portion of the article focuses on Dr. Brinton?s status as a Fellow of the World College of Refractive Surgery & Visual Sciences (WCRS), an independently verified credential that recognizes measurable excellence in surgical outcomes, research contributions, and educational leadership. This fellowship places Dr. Brinton among an international group of surgeons who have demonstrated long-term commitment to advancing refractive surgery through peer-reviewed performance standards. The credential provides reporters, colleagues, and patients an objective benchmark for understanding clinical expertise in a field that continues to grow in both complexity and public interest.

The article also highlights Brinton Vision?s role in FDA-approved clinical research. Dr. Brinton served as a principal investigator in multi-center clinical trials supporting the EVO ICL lens, a technology designed for patients who are not ideal LASIK candidates due to high prescriptions or thin corneas. These studies contributed to national conversations about refractive surgery access, safety, and long-term visual outcomes. The publication notes that participation in such trials has positioned Brinton Vision as a clinic frequently consulted by patients traveling from across the country for advanced vision correction evaluations.

The announcement further notes that Brinton Vision maintains a perfect 5.0 Google rating based on thousands of patient reviews, a data point included in the article to contextualize recognitions related to patient experience and long-term visual acuity. While awards acknowledge innovation and clinical achievement, the publication emphasizes that measurable outcomes remain the foundation of refractive surgery decision-making for the broader public. The article explains that recognitions help clarify a clinic?s consistency and accountability at a time when patients are increasingly evaluating providers based on verified results.

In discussing the release of the article, Dr. Brinton stated, ?Awards and recognitions provide external validation of the standards we strive to maintain every day. The broader significance of these honors lies in the trust they help establish for patients who are comparing options in vision correction. Our participation in clinical research, commitment to technology, and ongoing evaluation through peer-reviewed credentials reflect our mission to provide care grounded in science.?

The new publication arrives at a time when national interest in refractive surgery continues to grow due to improvements in diagnostics, laser precision, and personalized treatment planning. Reporters seeking objective measures of quality within the LASIK field will find detailed insight within the article, while prospective patients will gain clarity on how public recognitions and professional credentials help differentiate providers in a competitive healthcare landscape.
