Paragon Steel Strengthens Coverage Steel Distribution Across the San Fernando Valley

February 22, 2026

COMMERCE, CA - February 22, 2026 -

Paragon Steel is strengthening coverage across the San Fernando Valley, expanding steel supply and processing support for contractors and fabricators working on industrial and commercial projects in and around Chatsworth and other key Valley corridors. The company is aligning its services with the needs of manufacturers, logistics operators, and commercial property owners who are upgrading existing facilities and developing new space throughout the region. By dedicating additional resources to Valley projects, Paragon Steel aims to help construction teams manage tight schedules, complex phasing, and constrained sites more effectively.

Industrial and commercial work in the San Fernando Valley often involves balancing active operations with ongoing construction. Many facilities must continue producing, storing, or moving goods while structural changes, expansions, or tenant improvements are underway. This creates a need for carefully coordinated deliveries and installation sequences so that projects can advance without causing unnecessary disruption. Paragon Steel?s expanded focus is intended to support contractors who are working within these constraints and need a steel partner that can adjust to the realities of live job sites.

The company supports projects in Chatsworth and other San Fernando Valley industrial corridors, offering flexible delivery schedules and processing services that help local shops and job sites keep projects on track. These projects can include new industrial buildings, upgrades to existing plants and warehouses, the addition of mezzanines and platforms, and retrofits designed to accommodate new equipment or code requirements. By working directly with project managers and superintendents, Paragon Steel helps ensure that steel arrives in quantities and configurations that are practical for staging and installation.

?Contractors in the San Fernando Valley are often working in facilities that cannot afford extended downtime,? saidJim Stavis, President & CEO of Paragon Steel ?Our goal is to provide steel in a way that supports their schedules, respects their access limitations, and helps them complete work with as little disruption as possible.?

Paragon Steel offers structural shapes, plate, and miscellaneous metals to support a wide range of Valley project types. The company?s processing capabilities, including cutting, drilling, and basic fabrication operations, are geared toward preparing components for efficient installation. On projects where space is limited or where work must be completed during short access windows, having material arrive ready for installation can significantly reduce the amount of field work required and help crews maintain productivity.

Delivery planning is a central component of Paragon Steel?s approach in the San Fernando Valley. The company works with contractors to identify appropriate delivery times, truck routes, and offloading locations that fit within facility operations and neighborhood conditions. This planning helps prevent conflicts with plant traffic, nearby businesses, and local regulations. When projects call for early?morning, evening, or weekend work, Paragon Steel can coordinate deliveries to align with those schedules where practical.

In addition to direct job?site deliveries, Paragon Steel collaborates with Valley?based fabricators that support local industrial and commercial customers. When a project requires shop?built assemblies, the company can sequence material deliveries so that fabricators receive steel in the order needed to keep production flowing smoothly. This coordination helps ensure that shop schedules and field installation plans remain aligned, reducing the risk of bottlenecks between phases.

Paragon Steel?s increased emphasis on Chatsworth and the broader San Fernando Valley complements its service to customers throughout the greater Los Angeles area. The company?s familiarity with the region?s industrial corridors, business parks, and commercial districts allows it to plan practical, efficient strategies for both material processing and delivery. By combining local knowledge with a broad product line and in?house processing capabilities, Paragon Steel aims to offer contractors a dependable steel supply partner for both new construction and ongoing facility improvements in the Valley.

Contractors and fabricators planning projects in Chatsworth and other San Fernando Valley communities can contact Paragon Steel to discuss upcoming work and material requirements. The company?s team can review drawings, phasing plans, and schedule constraints to develop steel supply and processing strategies that support safe, efficient construction and help keep Valley projects moving forward.
