Paragon Steel Scales Up Service for Gateway and Inland Industrial Corridors

March 06, 2026

COMMERCE, CA - March 06, 2026 -

Paragon Steel is scaling up service for contractors and fabricators working in the gateway and inland industrial corridors of the Los Angeles region, with a particular focus on projects in Commerce, Vernon, City of Industry, and Montebello. The company is aligning steel supply and processing capabilities with the needs of manufacturers, distribution centers, and industrial property owners who are expanding and upgrading facilities in these heavily utilized areas. By dedicating additional resources to these corridors, Paragon Steel aims to help project teams keep work on schedule while managing the operational demands of active industrial environments.

Industrial projects in Commerce, Vernon, City of Industry, and Montebello often take place in facilities that cannot easily pause operations. Production lines, warehousing functions, and logistics activities must frequently continue while structural changes, expansions, or reconfigurations are underway. This creates tight windows for installation and strict requirements around safety, access, and staging. Paragon Steel?s enhanced focus is intended to support contractors navigating these conditions by coordinating steel deliveries and processing around the realities of live job sites.

Paragon Steel provides regular shipments to customers in Commerce, Vernon, City of Industry, and Montebello, helping plants and fabrication shops in these industrial corridors keep projects moving without overloading in?house inventory. Projects can range from new building construction and large?scale expansions to mezzanine additions, equipment support structures, and retrofits aimed at improving efficiency or meeting updated compliance standards. By working closely with project managers and shop leaders, Paragon Steel helps ensure that steel arrives in manageable quantities that fit both the work plan and the available space.

?Contractors and facility owners in these corridors depend on reliable material supply to keep their projects and operations on track,? said Jim Stavis, President & CEO of Paragon Steel. ?Our goal is to provide steel in a way that supports their schedules, respects their operational constraints, and helps them complete work safely and efficiently.?

The company offers structural shapes, plate, and miscellaneous metals to support the broad mix of projects common to Commerce, Vernon, City of Industry, and Montebello. Paragon Steel?s processing capabilities include cutting, drilling, and basic fabrication operations that prepare components for installation, which can be especially valuable on projects where onsite fabrication must be minimized due to safety protocols or limited work areas. Having materials arrive ready for installation helps contractors make the most of short work windows and reduces the amount of noisy or disruptive activity required at the facility.

Delivery planning is a key part of Paragon Steel?s approach in these industrial corridors. The company collaborates with contractors and facility representatives to identify suitable delivery times, truck access routes, and offloading locations that minimize disruption to plant and warehouse operations. This may involve coordinating around shift changes, shipping and receiving schedules, or periods of reduced activity on the production floor. By addressing these details in advance, Paragon Steel helps reduce delays and avoid conflicts that can impact both construction progress and day?to?day operations.

Paragon Steel also works closely with local fabricators who serve customers in Commerce, Vernon, City of Industry, and Montebello. When projects require shop?built assemblies such as platforms, stairs, railings, or equipment supports, the company can sequence material deliveries to match fabrication priorities and installation schedules. This coordination supports smoother handoffs from design to shop to field, helping contractors maintain momentum throughout the life of a project.

The company?s expanded emphasis on these industrial corridors complements its broader service to customers throughout the greater Los Angeles area. Paragon Steel?s familiarity with the facilities, roadways, and business parks that define Commerce, Vernon, City of Industry, and Montebello allows it to plan practical, efficient solutions for both processing and delivery. By combining local knowledge with a comprehensive product offering and in?house processing, the company seeks to be a dependable steel

supply partner for new construction, modernization, and ongoing facility improvements in these key industrial zones.

Contractors, fabricators, and facility owners planning projects in Commerce, Vernon, City of Industry, or Montebello can contact Paragon Steel to discuss upcoming work and material needs. Paragon Steel is available to review drawings, schedules, and site conditions to develop steel supply and processing plans that support safe, efficient construction and help keep critical industrial projects on track.
