San Francisco, California based SlowFoodNation has announced the release of a new review for a nootropic. The site's newest review is on coluracetam, which belongs to a group of nootropics known as racetam, and is currently being sought as treatment for depressive disorders and anxiety. In the review by SlowFoodNation, recommendations on the best shops to purchase the product are also offered.

Tom Wells, a spokesperson for the site says, "Our goal is to provide information to consumers about these products, how they work, which ones don't work, and where to purchase the ones that do."

In the review, which can be found at <http://slowfoodnation.org/nootropics/coluracetam/>, the site relates first-hand experience with coluracetam, explaining side effects and benefits of using the product. The review says that the reviewer felt much better within just a few hours of taking the first dose, experiencing clearer vision and more alertness.

"The effect was similar to what I had experienced with Sunifiram," says the reviewer. He goes on to say that the overall effects of the drug were profound and powerful, and that they lasted for up to four hours. The review also goes over the effect of better moods and increase in saturation of what the reviewer was seeing within just a few minutes of taking the drug. Memory improvement was also experienced according to the review, which states that the reviewer was able to remember things from books more extensively than ever before.

SlowFoodNation states that their goal is to inform consumers about drugs and supplements and their possible side effects and generally give them information related to new medications and what they should expect when taking them. The reviewer of coluracetam states that there were no adverse side effects and that memory, both long and short term, were improved drastically for three to four hours after taking the first dose.

Those interested in learning more about the review, which states where the drug can be purchased and various other benefits of taking it, can do so on the SlowFoodNation official site, where reviews of other medications and supplements can also be found.
