

AWI Manufacturing Kicks Off 2026 Trade Show Season at IPPE

January 22, 2026

January 22, 2026 - PRESSADVANTAGE -

AWI Manufacturing, a leading U.S. provider of stainless steel equipment for the food and beverage industry, will kick off its 2026 trade show schedule at the International Production & Processing Expo (IPPE) 2026. Long regarded as a favorite event for the AWI team, IPPE provides an opportunity to connect with processors, engineers, and industry partners early in the year and engage in conversations that help shape upcoming projects and facility improvements.

IPPE is one of the largest and most influential trade shows serving the protein and food processing industries, bringing together professionals from poultry, meat, prepared foods, and pet food sectors. For AWI, the show serves as a key starting point for the year, offering direct insight into evolving plant requirements, sanitation challenges, and equipment expectations.

At IPPE 2026, AWI will showcase its line of stainless steel sanitary solutions, including sanitary drain systems, electrical enclosures, tanks, and hex hangers. Each product is engineered to support food safety, sanitation, and long-term performance in demanding processing environments where durability and cleanability are essential. As processing facilities face increasing pressure to maximize uptime and adhere to

stringent hygiene protocols, the reliability of foundational infrastructure becomes paramount. AWI's presence at IPPE underscores the company's dedication to providing solutions that not only meet current industry standards but also anticipate the future needs of high-volume production environments.

AWI's sanitary drain systems include trench drains, floor sinks, and standard drains designed to withstand aggressive washdowns, heavy traffic loads, and harsh cleaning chemicals. Fully welded construction and corrosion-resistant stainless steel materials help reduce harborage points and simplify sanitation, supporting consistent cleaning protocols and operational efficiency.

In addition to drains, AWI will highlight its stainless steel electrical enclosures, tanks, and hex hangers. These solutions are designed to protect critical systems, support safe equipment mounting, and provide reliable performance in wet, high-pressure environments. With a focus on hygienic design and precision fabrication, AWI's equipment is built to meet the realities of daily production while supporting regulatory compliance. This attention to detail extends to the company's manufacturing philosophy. By manufacturing exclusively in the United States, AWI ensures consistent quality control and faster lead times for North American partners, helping facility managers avoid the common logistical delays often associated with offshore sourcing.

With more than 56 years of experience, AWI continues to supply hygienic, U.S.-made stainless steel equipment designed to meet the rigorous needs of food, poultry, meat, and pet food processing facilities. From small upgrades to large-scale projects, AWI works closely with customers to deliver solutions that align with their operational goals and sanitation standards.

"IPPE is always a great way for us to start the year," said Brent Johnson, Vice President of Sales & Marketing at AWI Manufacturing. "It allows us to reconnect with customers, discuss upcoming projects, and share how AWI continues to evolve our product offerings to meet the needs of modern processing facilities."

AWI invites attendees to visit Booth #C26195 at IPPE 2026 to learn more about equipment solutions designed to deliver durability, cleanability, and confidence on the plant floor. AWI team members will be available throughout the show to discuss applications, customization options, and how AWI products can support long-term facility performance.

About AWI Manufacturing

AWI Manufacturing, based in Winsted, Minnesota, has been serving the food and beverage industry for over five decades with stainless steel sanitary solutions. The company specializes in drains, enclosures, tanks, and custom metal fabrication, all built to the highest sanitation and durability standards.
