

Mindmachines.com Advances Mind Technology with Enhanced pROSHI Protocols for Meditation Device

February 13, 2026

Dallas, Texas - February 13, 2026 -
Mindmachines.com has expanded the capabilities of its ROSHIwave IN-SIGHT Mind Machine with advanced brainwave disentrainment protocols designed to help users achieve deeper meditative states and improved mental clarity. The third-generation mind device incorporates refined photostimulation capabilities and expanded protocol options to support various wellness and cognitive enhancement applications.

The enhanced ROSHIwave utilizes Dynamic Neuro-Activation, a proprietary process that delivers precisely calibrated flickering light patterns through specialized RGB LED glasses to influence brainwave frequencies naturally. This approach differs from traditional entrainment methods by dis-entraining repetitive mental patterns rather than synchronizing the brain to specific frequencies, allowing the brain to normalize its activity without forced synchronization.

"The evolution of our pROSHI protocols represents a significant advancement in brainwave disentrainment technology," said Fred Williams, Director of Product Development at Mindmachines.com. "By refining our

photostimulation capabilities and expanding our protocol library, we're providing users with more effective tools for achieving meditative states that previously required years of dedicated practice."

The updated device features all classic ROSHI-style protocols that have undergone extensive research, plus newly developed multiplexed versions that expand its functionality. These enhancements allow the technology to address a broader range of user needs, from basic stress relief to advanced cognitive optimization. Users can modify the color output of the glasses through simple button controls, customizing their experience based on personal preferences and specific wellness goals.

The mind technology operates through what the company describes as an Error-Correction System for the Brain, which helps normalize brainwave patterns to support improved performance across various cognitive and wellness areas. The device guides users to achieve deep meditative states beyond the perception of time without requiring conscious effort or prior meditation experience. This approach has attracted attention from both meditation practitioners and individuals seeking alternatives to traditional mindfulness practices.

Nearly 100 practitioners worldwide are currently using the ROSHIwave for applications in stress management, behavioral modification, and performance optimization. The device serves as what the company calls a Digital Compass for the brain, gently normalizing brainwaves and guiding the mind to a sublime meditative state. The technology provides a non-invasive method for achieving altered states of consciousness and ganzfeld effects that support inner peace, personal wellness, and improved sleep quality.

The enhanced ROSHIwave addresses growing demand in the mind machine market as more individuals seek technology-assisted approaches to mental wellness and performance enhancement. The device is positioned as a wellness tool for general stress management and cognitive enhancement applications rather than as a medical device. The company emphasizes that individuals with seizure disorders should not use the product.

Mindmachines.com is an online distributor of brain machines, brainwave entrainment technology, AVS stimulation devices, EEG neurofeedback equipment, and meditation machines. The company serves as the worldwide distributor of the ROSHIwave self meditation device, which is currently available through their website.
