

STAPLERMAXX Expands Support for Switzerland's Transition to Electric Forklifts and Pallet Trucks

January 29, 2026

OFTRINGEN, CH - January 29, 2026 -
STAPLERMAXX, a leading Swiss provider of material handling equipment, has expanded its inventory and service capabilities to meet growing demand for electric and low-emission lifting solutions across Switzerland's logistics and industrial sectors. The company's enhanced focus on sustainable material handling equipment comes as Swiss businesses increasingly prioritize environmental responsibility in their warehouse and distribution operations.

The shift toward electric material handling equipment has accelerated throughout Switzerland as companies seek to reduce emissions while maintaining operational efficiency. STAPLERMAXX has responded by strengthening its offerings of electric three-wheel and four-wheel forklifts, electric scissor lifts, and electric stair climbers, alongside traditional combustion models. The company maintains a comprehensive inventory at its central warehouse in Oftringen, ensuring immediate availability for Swiss businesses requiring rapid equipment deployment.

The transition to electric lifting equipment represents more than an environmental choice for Swiss businesses; it reflects a fundamental shift in how modern logistics operations approach efficiency and sustainability, emphasizes STAPLERMAXX. The company says their expanded inventory of STAPLERMAXX pallet trucks and forklifts, combined with flexible rental options, enables companies to test and adopt electric solutions without significant upfront investment.

The company's rental program has become particularly relevant for businesses evaluating electric equipment before making purchase decisions. This approach allows logistics and industrial companies to assess the performance of electric models in their specific operational environments while maintaining flexibility in their equipment strategies.

Beyond equipment supply, STAPLERMAXX has strengthened its commitment to supporting the entire lifecycle of material handling equipment. The company provides comprehensive spare parts inventory, ensuring that electric and combustion equipment remains operational with minimal downtime. As a member of the Swiss Hubstapler Verband Swisslifter, STAPLERMAXX conducts safety checks and maintenance services that help extend equipment lifespan and maintain compliance with Swiss safety regulations.

The company has also implemented an environmental sustainability program that addresses the disposal challenges associated with electric equipment. STAPLERMAXX includes a pre-paid disposal fee in the sale price of electrically operated forklifts and lifting equipment, enabling customers to dispose of lead accumulators at recognized recycling facilities or directly through STAPLERMAXX at no additional cost.

Swiss businesses can explore the full range of material handling solutions at staplermaxx.ch, where detailed specifications and rental options are available for various lifting equipment categories. The platform serves as a resource for companies planning equipment transitions or expansions in their material handling capabilities.

STAPLERMAXX specializes in lifting and conveying technology for the Swiss market, offering sales, rentals, spare parts, and service for a comprehensive range of material handling equipment. The company partners with international manufacturers including HANGCHA FORKLIFTS, TVH Parts Holding NV, and Durwen to provide quality equipment solutions. From its central warehouse in Oftringen, STAPLERMAXX serves logistics, industrial, and construction businesses throughout Switzerland with immediate delivery capabilities for most products.
