

Go Industries Inc Expands Mud Flaps Line for Dually Trucks to Meet Commercial Demand

February 06, 2026

Richardson, TX - February 06, 2026 -
Go Industries Inc, a Texas-based manufacturer of truck protection equipment, has expanded its commercial-grade mud flap offerings to address growing demand from fleet operators and commercial trucking companies across North America. The expanded product line features mud flaps specifically engineered for dual-wheel trucks, including models compatible with GMC, Chevrolet, Ford, and Dodge Ram vehicles.

The expansion responds to increased requirements from the commercial trucking sector for heavy-duty protection solutions that can withstand constant use while protecting vehicles from road debris, rocks, sand, salt, and other hazards. The company's dually mud flap sets are constructed from non-recycled rubber materials and are available in multiple configurations, including Classic Dually Sets, Stainless Steel Dually Sets, and Diamond Tread Dually Sets.

"The commercial trucking industry requires protection equipment that performs consistently under demanding

conditions," said a Go Industries spokesperson. "Our expanded line of Go Industries mud flaps addresses the specific needs of dually truck operators who need reliable protection for their vehicles and cargo while maintaining compliance with road safety regulations."

The expanded product line includes complete mud flap sets as well as individual components and mounting brackets, allowing fleet operators to customize their protection systems based on specific vehicle requirements. Each product is designed to fit all dual wheel trucks, with customers able to select components based on their truck's year, make, and model.

Commercial mudguards serve a critical function in protecting both the equipped vehicle and other motorists on the road. By deflecting debris from rear tires, these protection systems help prevent damage to vehicle paint and undercarriages while reducing the risk of debris striking vehicles traveling behind commercial trucks. This protection becomes particularly important for dually trucks, which feature dual rear wheels on each side and are commonly used in heavy-duty commercial applications.

The expansion complements Go Industries' existing portfolio of truck protection equipment, which includes grille guard systems, headache racks, winch application systems, and other accessories designed for commercial and consumer applications. The company backs its expanded mud flap line with comprehensive warranty coverage and provides technical support to assist with installation and maintenance requirements.

Go Industries Inc has been manufacturing truck protection equipment since 1978, serving fleet operators, law enforcement agencies, and individual truck owners throughout North America. The company specializes in heavy-duty protection solutions designed to withstand the demands of commercial use while maintaining vehicle functionality and appearance. Based in Richardson, Texas, Go Industries maintains Platinum Status with SEMA, reflecting its commitment to quality manufacturing and industry standards. The company's product portfolio encompasses front and back end protection systems, custom manufacturing capabilities, and specialized equipment for law enforcement vehicles.
