Go Industries Expands Custom Manufacturing and Fabrication Capabilities for OEM Partners

February 17, 2026

Richardson, TX - February 17, 2026 -
Go Industries has announced the expansion of its custom manufacturing and fabrication services to meet growing demand from original equipment manufacturers across multiple industries. The Texas-based manufacturer has enhanced its production capabilities to include advanced precision manufacturing for AI data center server racks, comprehensive tube services, and expanded sheet metal operations.

The expansion addresses increasing requirements from OEM partners in automotive, telecommunications, medical equipment, defense, and the emerging AI data center infrastructure market. With over 40 years of manufacturing experience, the company has positioned itself to support the rapid growth in data infrastructure needs while maintaining its established presence in traditional manufacturing sectors.

"The expansion of our fabrication capabilities reflects our commitment to meeting the evolving needs of our OEM partners across diverse industries," said a Go Industries spokesperson. "From AI data center infrastructure to medical equipment and defense applications, we're equipped to deliver precision manufacturing solutions with competitive pricing and rapid turnaround times."

The enhanced manufacturing services now encompass comprehensive tube services including CNC bending, rolling, end forming, and sawing. Sheet metal capabilities have been expanded to feature robotic welding, laser cutting, plasma cutting, bending, shearing, and notching operations. Additional services include certified welding to D1.1, B31.1, and B31.3 standards, chrome plating, powder coating, pipe profiling, and complete assembly and packaging solutions.

All manufacturing operations take place at the company's Texas facilities, where advanced equipment including a high-capacity powder coating line and batch oven support finishing requirements. The extensive inventory of tooling and machinery enables cost-effective production solutions across varying order volumes, from prototype development to large-scale production runs.

The company's private label programs enable businesses to develop and launch their own branded products without investing in manufacturing infrastructure. These programs include comprehensive support from initial design and engineering through final delivery, allowing partners to bring products to market efficiently.

Industries currently served include automotive, cable and wire, commercial equipment, emergency equipment, defense, Department of Transportation, gas, medical, oil, public safety divisions, sport and fitness, transportation safety equipment, and telecommunications. The diverse client base demonstrates the versatility of the company's manufacturing capabilities and engineering expertise.

Go Industries maintains Platinum Status with SEMA, reflecting its commitment to quality and innovation in the automotive aftermarket industry. As a division of Longhorn Reels, the company combines specialized manufacturing expertise with broader industrial capabilities to serve diverse market segments.

Established in 1978, Go Industries specializes in truck accessories, law enforcement equipment, and custom manufacturing solutions. The company continues to invest in advanced manufacturing technologies and process improvements to maintain its position as a leading custom manufacturer in the Southwest region. The expansion of services reinforces the company's dedication to supporting North American manufacturers with comprehensive, domestically-produced solutions.
