

## **Dental Implants Lichfield Private Dentist Announces Consultation Availability at Lichfield Dental Care**

*February 05, 2026*

February 05, 2026 - PRESSADVANTAGE -

Lichfield Dental Care has announced the availability of consultation appointments for patients interested in dental implant treatments. The update reflects the practice's provision of restorative dental options for individuals seeking solutions for missing or damaged teeth. Appointments have been opened for those wishing to explore whether dental implants may be appropriate for their circumstances.

Dental implants are a restorative dental treatment used to replace missing teeth with artificial alternatives that function like natural teeth. The procedure involves placing titanium posts into the jawbone, which act as artificial tooth roots. Once these posts have fused with the bone through a process called osseointegration, replacement teeth are attached to restore both function and appearance. According to the announcement, dental implants offer a long-term solution for people who have lost teeth due to decay, gum disease, injury, or other dental problems.

The practice noted that dental implants differ from other tooth replacement options such as dentures or

bridges because they are anchored directly into the jawbone. This approach provides stability during eating and speaking, and helps preserve bone structure in the jaw. Missing teeth can lead to bone loss over time as the jawbone no longer receives stimulation from tooth roots. Dental implants help counteract this process by maintaining pressure on the bone, which can prevent the deterioration that often occurs with tooth loss.

Studies have indicated that the implant restoration process has achieved success rates exceeding 95 per cent. The practice noted that dental implants are the only tooth replacement option that actively helps stimulate bone growth and prevent bone loss, making early treatment after tooth loss particularly beneficial.

Further details about dental implant treatments can be viewed at:  
<https://getasmile.co.uk/dental-implants-lichfield-staffordshire/>.

Lichfield Dental Care has said that the first step in the consultation process is to do a full check of the patient's dental health and medical history. The dental team looks at the mouth and takes X-rays or scans to check the structure and density of the bones. This information tells the doctor if the patient has enough bone to support implants or if they need to do something else first, like bone grafting. Each case is analysed on its own because things like overall health, oral hygiene habits, and the state of the remaining teeth all affect how treatment plans are made.

Consultations at Lichfield Dental Care include a discussion about what the treatment involves and how long the process typically takes. The dental team explains that implant placement usually requires several months from start to finish, allowing time for healing between stages. Patients receive information about what to expect during recovery and how to care for the implant site while it heals. The consultation also covers any potential complications and what steps can be taken to minimise risks.

The practice has made clear that not everyone is a suitable candidate for dental implants. Conditions such as uncontrolled diabetes, certain medications, or habits like smoking can affect healing and may influence whether implants are recommended.

Additional information regarding the range of dental treatments offered can be found at:  
<https://getasmile.co.uk/dental-treatments-lichfield-staffordshire/>.

The announcement is part of the practice's larger effort to provide dental care to people in Lichfield and nearby areas of Staffordshire. Lichfield Dental Care offers a wide range of services, such as regular dental checkups, fillings, root canals, cosmetic dentistry, and orthodontics. The practice is private, and the costs of treatment are made clear during consultations. Each patient gets a treatment plan that is specific to their needs and situation.

According to the release, the availability of dental implant consultations reflects patient demand for permanent solutions to tooth loss. The clinic noted that many people prefer implant-based treatments because they provide function and stability comparable to natural teeth. Consultations allow the dental team to assess each patient's unique circumstances and recommend the most appropriate course of action.

The practice accepts private patients for both implant treatments and other dental care options. The dental team works with patients to develop treatment plans that address their needs while considering factors such as budget, timeline, and personal preferences. Regular follow-up appointments are scheduled to monitor the progress of dental implants and ensure proper integration with the jawbone.

More information about the practice and its approach to dental care can be accessed at: <https://getasmile.co.uk/>.

Lichfield Dental Care has confirmed that appointments are being scheduled for patients interested in arranging a dental implant consultation. The practice continues to accept private patients across its range of dental treatments.
