

Neopure Now Offers More Industrial Water Treatment Services

April 05, 2016

April 05, 2016 - PRESSADVANTAGE -

Neopure, a business in Stafford, TX, is proud to announce that they now also offer water treatment and sewage treatment services. This is on top of their already extensive list of services that focus on water purification technology. The new services are already proving to be in high demand in various industries. More details can be obtained from the company's website at <http://neopuretech.com/>.

Dean Themy from Neopure says: "Industrial water treatment systems are used in many industries to optimize water-based industrial processes. These processes may include heating, cooling, cleaning, rinsing, and processing. Water treatment is used to reduce operating costs as well as the risks associated with these processes. Poor or inadequate treatment allows water to contact the surfaces of pipes and containment vessels. Cooling towers are also susceptible to scale and corrosion. If left untreated, the warm and dirty water in a cooling tank becomes susceptible to bacterial growth. Legionnaire's disease is a serious, and often fatal, consequence of such contamination. We ensure all these risks are avoided."

Dean Themy, as can be seen on his LinkedIn profile on <https://www.linkedin.com/in/deanthemy>, is the inventor, founder, and manager of Neopure Technologies. He is an expert in electrochemical equipment and he is uniquely qualified to deliver water purification and other industrial water treatment services.

For Neopure, the goal is to make sure water is treated properly, thereby protecting equipment, public health, and the environment. They ensure wastewater is managed properly, ensuring it is treated and reused where possible, or disposed of properly if it cannot be reused. In so doing, they also help businesses to reduce costs and consumption charges.

Through their services, Neopure addresses various issues such as scaling, microbiological activity, and the disposal of residual wastewater. Scaling and corrosion can be incredibly detrimental to metal and other equipment. Other issues include microbes, which can be detrimental not just to equipment, but also to public health. The company, as explained on their Facebook page on <https://www.facebook.com/neopuretech>, can address all of these concerns through their extensive technology, water purification systems, as well as

industrial water treatment services.
