Keathley Landscaping Announces Enhanced Yard Drainage Solutions for North Texas Properties

February 25, 2026

GARLAND, TX - February 25, 2026 -
Keathley Landscaping, a Dallas-based landscaping and drainage specialist company, announces the expansion of its comprehensive drainage and landscaping services to address the increasing challenges North Texas property owners face with water management and lawn health. The company, led by NDS Certified Drainage Contractor Logan Keathley, has enhanced its service capabilities to provide integrated solutions that address both immediate drainage concerns and long-term landscape sustainability.

The announcement comes as North Texas continues to experience irregular rainfall patterns and extreme weather events that create significant drainage challenges for residential and commercial properties. These conditions, combined with the region's challenging clay soil composition, have led to an increase in foundation damage, landscape erosion, and persistent flooding issues that require professional intervention.

Keathley Landscaping's approach combines advanced drainage system design with comprehensive landscape restoration, including professional sod installation and custom stonework. The company's team conducts thorough property evaluations to understand unique landscape characteristics, soil conditions, and water flow patterns before developing customized solutions. This comprehensive assessment ensures that drainage systems work in harmony with existing landscapes while preventing future water-related damage.

The company's drainage services encompass French drain installation, comprehensive grading solutions, and custom-designed buried drainage pipe systems tailored to each property's specific challenges. These solutions are particularly critical in North Texas, where heavy clay soils prevent proper water absorption and create conditions that can damage both landscapes and home foundations. The integration of these drainage systems with professional sod installation ensures that new lawns establish properly without the water stress that typically causes failure in the region.

Keathley Landscaping's expanded services also address the aesthetic aspects of drainage solutions through

custom stonework and hardscape installations that complement drainage systems while enhancing property appearance. Retaining walls, strategically placed to manage water flow and prevent erosion, serve dual purposes as both functional drainage components and attractive landscape features.

"Property owners often don't realize that drainage problems and lawn health are interconnected issues that require a unified approach," said Logan Keathley, NDS Certified Drainage Contractor and owner of Keathley Landscaping. "When we install yard drainage solutions, we're not just moving water away from structures ? we're creating conditions that allow landscapes to thrive while protecting the substantial investments homeowners have made in their properties."

The company has observed a significant increase in requests from property owners who have experienced repeated lawn failures and persistent water accumulation issues. Many of these problems stem from inadequate initial landscape planning that failed to account for proper drainage, leading to costly remediation needs that could have been prevented with proper initial installation.

Keathley Landscaping has been serving the North Texas region since 2002, providing comprehensive landscaping solutions throughout Dallas, Garland, Wylie, Plano, and surrounding communities. The company specializes in complete landscape transformations, offering services that include landscape design and installation, outdoor kitchen construction, patio covers, fence repair and installation, tree services, and landscape lighting systems. As an NDS Certified Drainage Contractor, the company maintains the highest industry standards for drainage system design and installation.
