

Smarter Air & Electrical Expands Air Conditioner Service and Maintenance Coverage Across South-East Queensland

February 10, 2026

February 10, 2026 - PRESSADVANTAGE -

Smarter Air & Electrical has announced an expansion of its air conditioner service and maintenance program across Brisbane, the Gold Coast, Redlands, Logan, and Ipswich. The move aims to provide more households and small businesses across South-East Queensland with reliable year-round system upkeep to maintain comfort, performance, and energy efficiency.

The company's decision to extend its servicing operations reflects an increasing awareness among Queensland property owners of the importance of regular maintenance for cooling systems. Over the past several years, the region's subtropical climate and growing residential development have led to a higher demand for qualified technicians capable of maintaining both ducted and split-system air conditioners.

Founded in 2019, Smarter Air & Electrical has built a reputation for workmanship, punctuality, and clear communication. The business operates from its Yatala headquarters and services a broad section of the South-East Queensland corridor. Its trained technicians carry out annual and biannual service appointments designed to keep air conditioning systems operating safely, efficiently, and within manufacturer guidelines.

Co-founder Davis Row said that extending the service and maintenance offering is a direct response to customer demand for ongoing system reliability. "Air conditioners are one of the most heavily used appliances in Queensland homes and workplaces," said Davis Row. "Without regular servicing, efficiency can drop and operating costs increase. Our expansion ensures that more residents and business owners can schedule consistent maintenance from qualified tradespeople familiar with local conditions."

Smarter Air & Electrical's maintenance process includes detailed inspection and cleaning of filters, coils, drains, and electrical components. Technicians test refrigerant levels, check airflow, and verify that

control systems and thermostats are functioning correctly. Each visit concludes with a service report outlining any recommendations or upcoming component replacements.

For homeowners, the benefits of regular servicing include improved indoor air quality, better cooling performance, and reduced risk of breakdowns during the peak summer season. For commercial clients, consistent maintenance supports compliance with energy efficiency standards and ensures the longevity of equipment. The company also provides emergency service options for urgent issues, ensuring minimal disruption to comfort or operations.

Co-founder Phillip Crawley emphasised that consistency and accountability are central to the company's approach. "Every service is performed by our in-house team, not subcontractors," said Phillip Crawley. "That allows us to ensure that the work meets our standards and that our clients receive honest feedback about their systems. We take the time to educate customers about simple maintenance steps between visits, like cleaning filters and keeping outdoor units clear."

Smarter Air & Electrical's service program applies to a wide range of systems, including both residential and light commercial setups. The company is experienced with leading air conditioning brands and is authorised under the manufacturer's service requirements. Its 10-year workmanship guarantee applies to all installations maintained under regular servicing, ensuring long-term reliability and compliance.

The company's expansion also coincides with regional growth in sustainable building practices. Regular air conditioning maintenance supports energy efficiency goals by keeping systems free of dust and obstructions that can reduce airflow and increase power consumption. With Queensland households facing rising energy costs, regular servicing has become an essential measure for controlling usage while maintaining comfort during prolonged warm periods.

Smarter Air & Electrical has observed a steady increase in bookings through referrals and repeat clients who value routine care. Many customers report improved system performance and a decrease in repair frequency after enrolling in scheduled maintenance. The business continues to receive strong reviews for professionalism, attention to detail, and clear communication regarding service findings and recommendations.

The expanded service coverage will be available immediately across all listed areas. Technicians will operate on a rotating schedule to ensure efficient response times during peak summer demand. Clients can request standard annual servicing or tailor a plan to their specific needs, taking into account usage, location, and environmental exposure.

This initiative reinforces Smarter Air & Electrical's ongoing commitment to delivering reliable and energy-efficient air conditioning support across South-East Queensland. By making qualified maintenance accessible to more residents and business owners, the company aims to contribute to a more sustainable and comfortable built environment in the region.
