Beary Landscaping Expands Snow & Ice Management Services Across Greater Chicago Area

February 13, 2026

LOCKPORT, IL - February 13, 2026 -
Beary Landscaping has announced expansion of commercial snow and ice management services throughout the Greater Chicago area for the 2026 winter season. The landscaping company, which has operated in the Chicagoland region for 13 years, has enhanced snow removal capabilities across its seven service locations to provide comprehensive winter property management for commercial properties, multi-family residential complexes, and municipal facilities.

The expanded snow and ice management services include organized snow plowing, sidewalk clearing, parking lot treatment, anti-icing applications, de-icing services, and snow hauling when accumulation exceeds on-site storage capacity. Beary Landscaping maintains 24/7 weather monitoring systems and deploys crews proactively based on forecast conditions to ensure properties remain accessible and safe during winter weather events.

"Commercial property managers and business owners need reliable snow removal partners who respond quickly and perform work to high standards," said a company representative from Beary Landscaping. "Our expanded snow and ice management capabilities reflect significant investment in equipment, personnel

training, and operational systems. We treat each property as if it were our own, ensuring thorough service that protects property investments and maintains safe conditions for tenants, customers, and visitors."

The expansion addresses growing demand from property managers seeking comprehensive winter services that go beyond basic snow plowing. Modern snow management requires coordinated services including pre-storm anti-icing to prevent snow bonding, prompt plowing during storm events, post-storm de-icing for remaining ice patches, and sidewalk clearing to maintain pedestrian access.

Snow plowing services utilize commercial-grade equipment appropriate for different property types and lot configurations. Beary Landscaping maintains specialized equipment including truck-mounted plows for large parking areas, skid steers for tight spaces, and sidewalk equipment for pedestrian pathways.

Sidewalk snow removal represents a critical service component as property owners face liability exposure when pedestrian walkways remain impassable or hazardous. Beary Landscaping clears sidewalks, building entrances, loading docks, and pedestrian pathways to maintain safe access throughout properties.

Anti-icing applications before winter storms help prevent snow and ice from bonding to pavement surfaces, making subsequent plowing operations more effective and reducing ice formation. Beary Landscaping applies liquid anti-icing treatments to parking lots, drive lanes, and high-traffic areas when weather forecasts indicate approaching precipitation.

De-icing services address ice formation on parking lots, sidewalks, and other paved surfaces after storms pass. Beary Landscaping applies granular or liquid de-icing products based on temperature conditions, surface types, and environmental considerations.

Snow hauling becomes necessary when multiple storm events fill designated snow storage areas or when property layouts lack adequate space for snow stacking. Beary Landscaping provides snow removal and hauling services using dump trucks and loaders to transport snow off-site.

Weather monitoring systems track approaching winter storms and provide crews with real-time precipitation and temperature data. Beary Landscaping uses weather intelligence to make informed deployment decisions, ensuring crews arrive at properties before significant accumulation occurs.

Service agreements define specific trigger depths for snow plowing, application rates for de-icing materials, and response time expectations based on property priorities. Beary Landscaping works with property managers to develop customized service plans that match property needs and budget parameters.

Service locations span the Greater Chicago area including Lockport, Arlington Heights, Aurora, Brookfield,

Elkhart, Lake Station, and Kenosha. This geographic coverage allows Beary Landscaping to serve properties throughout the metropolitan region.

Snow and ice management services integrate with year-round landscape maintenance programs that Beary Landscaping provides for many commercial properties. This integrated service approach allows property managers to work with a single contractor for lawn care, seasonal enhancements, and winter services.

Property managers and facility operators seeking snow and ice management services can contact Beary Landscaping through the company website. The firm provides consultations to assess property requirements and develop service proposals.
