

Belmont Plastic Surgery Expands Advanced Tummy Tuck Techniques for Chevy Chase Area Patients

February 23, 2026

CHEVY CHASE, MD - February 23, 2026 -
Belmont Plastic Surgery - Chevy Chase, a leading plastic surgery clinic, has expanded its range of advanced abdominoplasty techniques to better serve patients seeking body contouring solutions. The practice, which maintains a location in Chevy Chase, now offers enhanced surgical approaches designed to address diverse patient needs and deliver more customized results.

The expansion of surgical techniques comes as the practice responds to increasing demand for personalized body contouring procedures in the greater Washington DC region. The enhanced offerings include variations of traditional abdominoplasty, mini tummy tucks, and combination procedures that can be tailored to each patient's unique anatomy and aesthetic goals.

"The evolution of abdominoplasty techniques has allowed us to provide more precise and individualized treatment plans for our patients," said Dr. Eric Maiorino of Belmont Plastic Surgery. "By expanding our surgical approaches, we can now address a wider spectrum of concerns, from minimal excess skin to more

comprehensive abdominal reconstruction needs."

The practice's expanded techniques incorporate the latest advances in surgical methodology, including improved muscle repair techniques and refined incision patterns that can minimize scarring while maximizing aesthetic outcomes. These developments reflect broader trends in plastic surgery toward more customized and patient-specific treatment protocols.

Belmont Plastic Surgery - Chevy Chase tummy tuck surgery options now include specialized approaches for post-pregnancy restoration, significant weight loss patients, and those seeking subtle refinements. The practice utilizes comprehensive consultation processes to determine the most appropriate surgical approach for each case.

The timing of this expansion aligns with national statistics showing continued growth in body contouring procedures. According to recent industry data, abdominoplasty remains among the most requested surgical procedures, with patients increasingly seeking practices that offer multiple technique options and customized treatment plans.

"Patient education has become a crucial component of our consultation process," noted Dr. Maiorino. "Understanding the various surgical options available allows patients to make more informed decisions about their treatment and helps establish realistic expectations for their results."

The practice's approach emphasizes thorough pre-operative planning and assessment, utilizing advanced imaging when appropriate to help visualize potential outcomes. This comprehensive evaluation process helps ensure that patients receive the most suitable surgical technique for their specific circumstances.

Belmont Plastic Surgery has established itself as a prominent provider of both surgical and non-surgical aesthetic procedures in the Washington DC area. Led by board-certified plastic surgeons, the practice offers a comprehensive range of facial, breast, and body procedures. The clinic combines advanced surgical techniques with a patient-centered approach to care, focusing on delivering natural-looking results through collaborative treatment planning. In addition to surgical procedures, the practice provides various non-invasive treatments including injectables, laser therapies, and skin rejuvenation services, serving patients throughout the Washington DC metropolitan region from multiple convenient locations.
