

Go Industries Expands Custom OEM Manufacturing Capabilities to Meet Growing Demand Across Multiple Industries

February 20, 2026

Richardson, TX - February 20, 2026 -
Go Industries has announced the expansion of its custom manufacturing and fabrication services to meet increasing demand from original equipment manufacturers across diverse industrial sectors. The Texas-based manufacturer has enhanced its production capabilities to serve automotive, telecommunications, medical equipment, defense, and emerging AI data center infrastructure markets.

The expansion addresses the rapid growth in specialized manufacturing needs, particularly in the technology sector, where AI data center infrastructure requires precision-engineered server racks and components. Go Industries now offers comprehensive tube services, including CNC bending, rolling, end forming, and sawing, alongside expanded sheet metal capabilities featuring robotic welding, laser cutting, and plasma cutting technologies.

"The demand for reliable OEM manufacturing services has grown significantly as companies seek domestic

partners who can deliver precision components with quick turnaround times," said a Go Industries spokesperson. "Our expanded capabilities allow us to serve as a comprehensive manufacturing partner, handling everything from initial design through final delivery, ensuring our clients can bring their products to market efficiently."

The enhanced services include certified welding to D1.1, B31.1, and B31.3 standards, chrome plating, powder coating, and pipe profiling capabilities. These additions complement the company's existing design and engineering services, assembly, and packaging operations, creating a complete turn-key manufacturing solution for businesses across multiple sectors.

The expansion particularly benefits industries requiring stringent quality standards and rapid deployment capabilities. Medical equipment manufacturers, Department of Transportation suppliers, and oil and gas industry partners can leverage these enhanced capabilities for critical component production. The company's in-house design team works closely with clients from concept to completion, ensuring every part meets exact specifications while maintaining competitive pricing.

Sport and fitness equipment manufacturers have also benefited from the expanded capabilities, as demonstrated through recent custom fabrication projects for competition structures and specialized training equipment. The company's ability to handle complex geometries and varied materials makes it suitable for innovative product designs across recreational and professional applications.

Fabrication by Go Industries now encompasses projects ranging from emergency equipment for public safety divisions to specialized components for telecommunications infrastructure. The company's two state-of-the-art facilities in Texas utilize advanced equipment, including a high-capacity powder coating line and batch oven for finishing products, alongside an extensive inventory of tooling and machinery that enables cost-effective solutions for both prototype development and large-scale production runs.

Go Industries brings over 40 years of manufacturing experience to its expanded service offerings. Originally established in 1978, the company has evolved from producing truck accessories and law enforcement equipment to becoming a comprehensive manufacturing partner for businesses across North America. The Richardson, Texas-based manufacturer maintains its commitment to domestic production, with all engineering and fabrication completed within its Texas facilities.

The company services industries including automotive, cable and wire, commercial equipment, emergency equipment, defense, gas, medical, oil, public safety divisions, sport and fitness, transportation safety equipment, and telecommunications sectors.
