

SRH Landscapes LLC Announces Expansion of Commercial Landscape Design and Construction Services to Additional Texas Markets

February 17, 2026

DALLAS, TX - February 17, 2026 -

SRH Landscapes LLC, a Texas-based commercial landscaping firm with decades of experience serving large-scale properties, has announced the expansion of its commercial landscape design and construction services to additional markets across the state. The announcement marks a significant operational development for the company as it broadens access to a service that has traditionally been delivered to a concentrated set of metropolitan and municipal clients.

Founded in 1955, SRH Landscapes LLC has established a long-standing presence in the commercial and government landscaping sectors, providing integrated solutions encompassing planning, construction, and long-term landscape stewardship. The newly announced expansion makes the company?s commercial landscape design and construction service available to a broader range of cities and growing communities, responding to increased demand for coordinated, professionally managed outdoor environments tied to commercial and civic development.

The commercial landscape design and construction service focuses on planning and installing large-scale outdoor spaces for corporate campuses, mixed-use developments, office complexes, and other privately operated commercial properties. In commercial environments, landscape design shapes first impressions and influences how visitors, customers, and employees experience properties. According to SRH Landscapes LLC, the expansion reflects population growth across Texas and increased private-sector investment in commercial development, where durable, code-compliant, and environmentally responsive landscapes are considered integral to long-term property planning.

Commercial landscape design and construction differ from smaller-scale residential or decorative landscaping by emphasizing functionality, long-term performance, regulatory alignment, and integration with surrounding infrastructure. Projects typically involve collaboration with architects, engineers, developers, and municipal stakeholders to ensure that outdoor environments support safety, accessibility, water management, and long-term maintenance requirements.

SRH Landscapes LLC?s approach to commercial landscape design begins with site evaluation and planning. Each project accounts for soil conditions, drainage patterns, irrigation requirements, and plant selection suited to regional climate conditions. The construction phase then translates approved designs into installed landscapes, including grading, hardscape features, planting, irrigation systems, and erosion control measures. The process is structured to align with broader construction timelines, allowing landscape installation to coordinate with building completion and public access schedules.

The company noted that expanding the service footprint allows organizations in additional Texas markets to engage a single provider capable of managing both the design and construction phases of complex landscape projects. This integrated model reduces fragmentation between planning and execution, which can be a challenge on large commercial sites with multiple contractors and regulatory checkpoints.

?Expanding access to this service is about meeting communities where growth is happening,? said a business owner of SRH Landscapes LLC. ?Commercial landscapes play a role in how people experience workplaces, public facilities, and shared spaces. Making this service available in more locations allows projects to be planned and built with consistency, accountability, and long-term performance in mind.?

The value of commercial landscape design and construction extends beyond aesthetics. Well-designed landscapes contribute to stormwater management, reducing urban heat, improving pedestrian circulation, and supporting environmental compliance. In many jurisdictions, landscape plans are closely tied to zoning approvals, sustainability standards, and municipal design guidelines. SRH Landscapes LLC?s services incorporate these considerations early in the planning process, helping projects move through the review and approval stages more efficiently.

In addition, commercial landscapes often serve as public-facing components of developments, influencing how properties are perceived and used. Corporate campuses rely on outdoor spaces to support employee movement and gathering, while municipalities depend on durable landscapes that can withstand heavy use and varying weather conditions. The construction standards applied in commercial projects prioritize longevity, safety, and maintainability over short-term visual impact.

The expansion also supports continuity between construction and post-installation care. While the announcement centers on design and construction, SRH Landscapes LLC has emphasized that landscapes are built with long-term management in mind. Plant selections, irrigation layouts, and material choices are evaluated for how they will perform over years of use, not just at project completion. This perspective reflects a broader industry shift toward lifecycle-based planning in commercial development.

Industry observers note that Texas continues to see sustained commercial and civic development, particularly in suburban and secondary markets experiencing population growth. As new office parks, transportation facilities, recreational areas, and municipal buildings are developed, demand has increased for landscape contractors capable of managing large, technically complex installations. SRH Landscapes LLC?s expansion positions the company to participate more directly in these projects as development spreads beyond traditional urban centers.

The company?s experience with government and institutional projects has also informed how its commercial landscape design and construction service is delivered. Public-sector work often requires adherence to strict procurement processes, safety standards, and documentation requirements. Applying those same disciplines to commercial projects can provide developers and property managers with greater predictability during construction and clearer expectations for outcomes.

SRH Landscapes LLC stated that the expanded service availability does not change the scope or standards of its commercial landscape design and construction offering. Instead, it allows more organizations to engage the service under the same project management framework that has been applied to hundreds of completed projects across the state. The company will continue to operate from its Dallas headquarters while deploying project teams to newly added service areas.

As communities across Texas continue to invest in infrastructure and commercial development, the role of professionally designed and constructed landscapes remains closely tied to usability, compliance, and long-term value. By expanding its commercial landscape design and construction service to additional locations, SRH Landscapes LLC is extending an established approach to outdoor development to a broader segment of the state, aligning landscape planning with the realities of growth, regulation, and public use.
