# Hannah Restoration Completes Kitchen Water Damage Recovery in Murfreesboro Home

*March 05, 2026*

HENDERSONVILLE, TN - March 05, 2026 -
Hannah Restoration recently completed a comprehensive water damage restoration project in Murfreesboro, Tennessee, successfully returning a residential kitchen to its pre-damage condition after a burst spigot caused extensive flooding throughout the space.

The Middle Tennessee-based restoration company responded to the emergency call within their standard 30-60 minute timeframe, deploying their IICRC-certified technicians to assess and address the water damage that had affected the kitchen flooring, cabinetry, and surrounding areas. The incident, caused by a failed exterior spigot, required immediate water extraction and mitigation to prevent further structural damage and potential mold growth.

"When water damage strikes a home, especially in high-traffic areas like kitchens, rapid response and professional expertise make all the difference in minimizing long-term damage," said Justin Hampton, Owner of Hannah Restoration. "This Murfreesboro project exemplified our comprehensive approach, from initial water extraction through complete reconstruction of the affected areas."

The restoration process began with immediate water extraction using industrial-grade equipment, followed by thorough drying and dehumidification of the affected areas. The team carefully documented all damage for insurance purposes while working to salvage undamaged materials wherever possible. Once the mitigation phase was complete, the reconstruction phase commenced, including the replacement of damaged flooring, the repair of affected drywall, and the restoration of cabinetry.

Hannah Restoration's technicians utilized advanced moisture detection equipment to ensure no hidden water pockets remained within walls or subflooring, a critical step in preventing future mold growth and structural issues. The company's experience with Middle Tennessee's climate and building codes enabled them to address region-specific concerns during the restoration process.

"Every water damage situation presents unique challenges, and this Murfreesboro kitchen restoration required careful coordination between our water mitigation and reconstruction teams," added Hampton. "Our goal is always to minimize disruption to the homeowner while ensuring the property is restored to its original condition or better."

The completed project represents one of numerous residential water damage cases Hannah Restoration handles throughout Middle Tennessee each month. Common causes of residential water damage in the region include burst pipes, appliance failures, storm damage, and plumbing system failures like the spigot malfunction in this case.

Hannah Restoration is a family-owned disaster cleanup and restoration company serving Middle Tennessee since 2013. With over 30 years of combined experience in the restoration industry, the company provides 24/7 emergency response services including water damage restoration, mold remediation, fire damage restoration, crime scene cleanup, lead paint removal, asbestos removal, and comprehensive reconstruction services. The company maintains IICRC certification and assists clients with insurance claim documentation and coordination. Hannah Restoration serves residential and commercial properties throughout Middle Tennessee, including Nashville, Franklin, Murfreesboro, Gallatin, Smyrna, Lebanon, Mount Juliet, and surrounding communities.
