

Algo Trading Space Launches Space Tracker: Advanced Trading Journal and Analytics Platform for VIP Members

February 19, 2026

ELIN PELIN, BG - February 19, 2026 -
Algo Trading Space announced today the launch of Space Tracker, a comprehensive trading journal and analytics platform that combines real-time performance tracking with advanced trade analysis capabilities. The new tool is initially available exclusively to members of the Algo Trading Space VIP Club, with plans to offer wider access through a monthly subscription model in the coming months.

Space Tracker represents a significant advancement in trading analytics technology, addressing longstanding reliability concerns with third-party tracking solutions. The platform connects directly to MetaTrader 4 and MetaTrader 5 terminals through a read-only tracking robot, eliminating the need for password sharing or trading permissions while collecting no personal data from users.

"Space Tracker was developed to provide traders with a more reliable and comprehensive solution for monitoring their trading performance," said a spokesperson for Algo Trading Space. "The platform brings together the analytical capabilities traders expect from traditional tracking services with the detailed journaling features that help traders refine their strategies over time."

The platform deployment process requires users to log in at tracker.algotradingspace.com using their existing Algo Trading Space credentials. After downloading the MetaTrader robot and configuration file from the settings panel, users place the files in their MetaTrader MQL folder, attach the robot to a chart, and load the provided settings file. An optional feature allows traders to set custom start dates for fresh tracking periods.

Space Tracker provides real-time monitoring of balance, equity, and maximum equity drawdown metrics. The platform offers symbol exposure analysis and performance summaries, with advanced filtering capabilities that allow traders to segment data by broker, virtual private server, individual trades, and trading symbols. Trade analysis extends to magic number identification, duration tracking, and pip calculations.

A notable feature within Space Tracker is the Progress Tracker, specifically designed for traders participating in proprietary trading firm challenges. This component helps traders monitor their progress against challenge requirements and risk parameters. The platform also includes a snapshot feature that enables users to add notes and track account changes over time, creating a historical record of trading decisions and market conditions.

Algo Trading Space has outlined an ambitious development roadmap for Space Tracker that extends beyond the current feature set. Upcoming enhancements include artificial intelligence-powered comparison tools that will analyze the differences between backtested performance and live trading results. Additional planned features include portfolio-level insights and enhanced risk monitoring capabilities designed to help traders identify potential issues before they impact account performance.

The decision to launch Space Tracker initially to VIP Club members reflects Algo Trading Space's strategy of providing early access to new tools and features for its most engaged community members. This approach allows the company to gather feedback and refine the platform based on real-world usage before expanding availability to the broader trading community.

Algo Trading Space enters a market currently served by established platforms including FXBlue and Myfxbook for analytics, and TradeZella for journaling capabilities. The new platform distinguishes itself through its integrated approach that combines both analytics and journaling functions within a single interface.
