

Microsurgical Vasectomy Reversals by Dr. Mark Hickman Expands Surgery Services Across Southwest Region

February 26, 2026

New Braunfels, TX - February 26, 2026 -
Microsurgical Vasectomy Reversals by Dr. Mark Hickman announces expanded service offerings for patients seeking vasectomy reversal procedures throughout Texas, Louisiana, Oklahoma and beyond. The New Braunfels-based practice has introduced new scheduling options and consultation services to accommodate increasing patient demand across the Southwest region.

The expansion comes as the practice reports a significant increase in consultation requests from patients seeking vasectomy reversal procedures. Dr. Mark Hickman, a microsurgical surgeon with 26 years of experience in laparoscopic procedures, has performed thousands of vasectomy reversals using specialized microsurgical techniques that employ powerful operating microscopes and fine nylon sutures.

"The demand for vasectomy reversal procedures has increased substantially over the past year, prompting us to expand our service capacity and scheduling availability," said Dr. Mark Hickman, lead surgeon at the

practice. "Our microsurgical approach involves precise alignment of the vas deferens lumen and watertight closure, which has resulted in thousands of successful procedures and subsequent births throughout my career."

The practice now offers two surgical options to accommodate different patient requirements. The first option, priced at $3,300, includes the microsurgical reversal procedure with local anesthesia and oral sedative. The second option, at $4,200, features IV sedation administered by a Board Certified Anesthesiologist. Both options represent affordable, all-inclusive pricing with no additional surgical fees.

To support patients traveling from distant locations, the practice has established arrangements with local hotels in New Braunfels for discounted accommodation rates. This initiative addresses the needs of patients traveling from across Texas, Louisiana, Oklahoma and other states who require overnight stays before or after their procedures.

The microsurgical technique utilized at the practice involves repair of the vas deferens using advanced magnification technology. This method enables direct alignment of the lumen at both ends of the vas, creating conditions for reversal outcomes. The procedure typically takes two to three hours and is performed on an outpatient basis.

Recent updates to the practice's operations include implementation of a streamlined scheduling system and expansion of consultation services. The practice now offers free consultations to prospective patients, allowing them to discuss their specific situations and learn about the reversal procedure before committing to surgery. Educational resources have also been expanded through the practice's news section and frequently asked questions platform.

The practice has instituted a $1,000 non-refundable deposit requirement to secure surgical appointments, a measure implemented in response to an increase in last-minute cancellations. This policy helps maintain schedule efficiency while ensuring committed patients have access to timely procedures.

Microsurgical Vasectomy Reversals by Dr. Mark Hickman specializes in vasectomy reversal procedures using microsurgical techniques. Operating from New Braunfels, Texas, the practice serves patients throughout Texas, Louisiana, Oklahoma and across the United States. The practice has completed thousands of successful reversal procedures over 26 years, contributing to numerous subsequent births for patients seeking to restore fertility after vasectomy.
