

Mindmachines.com Advances Meditation Machine Technology with Enhanced Brainwave Disentrainment Protocols

February 27, 2026

Dallas, Texas - February 27, 2026 -
Mindmachines.com has announced significant enhancements to its ROSHIwave IN-SIGHT Mind Machine, incorporating advanced brainwave disentrainment protocols that enable users to achieve deeper meditative states typically associated with experienced practitioners. The portable meditation technology now features expanded protocol options and improved navigation systems designed to address various wellness and cognitive optimization objectives.

The enhanced ROSHIwave IN-SIGHT utilizes proprietary Dynamic Neuro-Activation technology, a process that works through photostimulation to normalize brainwave frequencies. Unlike traditional entrainment methods that synchronize the brain to specific frequencies, the disentrainment approach frees the mind from repetitive patterns, allowing natural normalization of brain activity. The device delivers calibrated light patterns through specialized RGB-enabled glasses, providing users access to approximately 100 different protocol options.

"The intersection of neuroscience and meditation technology has reached a pivotal point where individuals can access mental states that traditionally required decades of dedicated practice," said Fred Williams, Director of Product Development at Mindmachines.com. "The ROSHIwave serves as a practical tool for achieving mental clarity and peace, functioning like a digital compass that guides the brain to optimal states without conscious effort."

The technology addresses growing demand for easy meditation solutions as more individuals seek technology-assisted approaches to mental wellness and performance enhancement. Users report achieving states similar to those experienced by advanced meditation practitioners within 15-minute sessions, though individual results vary based on personal factors and consistency of use.

Clinical adoption of the technology continues to expand, with nearly 100 practitioners worldwide incorporating the ROSHIwave IN-SIGHT as an alternative to classic ROSHI devices that are no longer in production. The USB-rechargeable unit features navigation similar to click-wheel mp3 players, making the technology accessible for both professional and personal use.

The enhanced device supports multiple applications including stress management, sleep improvement, accelerated learning capabilities, and behavioral modification. Through brain training protocols, users can modify the color output of the glasses through simple button controls, enabling one pair of glasses to emulate the entire range of original pROSHI neurodynamic activator glasses configurations.

The fourth iteration of the technology, known as the pROSHI 2++, was developed by Chuck Davis and represents the latest evolution in the product line. The complete ROSHIwave IN-SIGHT package includes the console unit, color-changing RGB RoshiGlasses, a color-changing RGB Ganzfeld RoshiVisor, USB charging equipment, and a carrying case.

The device operates as a wellness tool for general stress management and cognitive enhancement through neurofeedback mechanisms. The company emphasizes that the ROSHIwave should not be used by individuals with seizure disorders.

Mindmachines.com is an online distributor of brain machines, brainwave entrainment technology, AVS stimulation devices, EEG neurofeedback equipment, mind machines and meditation machines. The company also serves as the worldwide distributor of the ROSHIwave self-meditation device. Based in Dallas, Texas, and operated by Av3X LLC, the company specializes in technologies designed to enhance mental performance, wellness, and personal achievement through advanced brainwave modulation techniques.
